

COINBIT NEXT (NET)

Pre-existing Exchange Coins based on Trade Mining Profit Share Model have failed to solve the problem of price depreciation following continuous coin issuance. NEXT (NET) coin is differentiated, Mining Coin 2.0 that tackles such problem. We restrict the initial issuance supply as 200,000,000 NET at the listing price of 1 KRW per coin, and to prevent price depreciation, we will flexibly adjust daily NEXT issuance supply accordingly to market situation.

[NEXT mining will start from the third day at Exchange 2]

At Exchange 2, will we not only gather at most 50% of the fees, which is the most ever, in Buy-Back Pool, but we also combine the fees of our profit to buy back NEXT. Furthermore, we will continuously decrease the circulating supply through proceeding buy back and burning of NEXT exceeding the daily issuance supply by attracting distinguished foreign investors. This process will also continuously stabilize, if not appreciate, the price of NEXT, thereby providing NEXT holders and investors new opportunities they have never met before.

Business Vision of NEXT (NET)

Coinbit NEXT (NET) is our biggest project, as it presents a new business vision easily distinguishable from those of other exchanges. We aim for globalization of our NEXT coin through listing on Coinmarketcap, as well as global exchanges, including Binance. We also aim for leading real-life application through partnership with domestic and foreign enterprises. Furthermore, through cooperation with other companies, we will always be adjusting the future direction of NEXT for the best possible outcomes, and put our best efforts into NEXT.

2.0 Mining Coin

We prevent the price depreciation through first gifting DEX Holders the priority privilege to exchange DEX with NEXT (NET), then issuing only relatively small amount

50% Buy-Back Coin

Defending the price of NEXT through buying as much of daily issuance as possible with 50% of Exchange 2 Fee Profit gathered in Buy-Back Pool, then burning the bought supply

Complete burning of daily supply

Stabilize the NEXT price through foreign investors, then proceeding buy back and burning of coin more than the daily issuance supply, thus continuously decreasing the total supply.

Independent Exchange

Active trading environment and provision of various investment opportunities for Coinbit Users through listing USD based STABLE coin, major coin and selected alt-coins

NEXT Trade Mining

With introduction of Trade Mining System, we allow mining 80% (1,600,000,000 NET) of max supply (2,000,000,000 NET) through trade mining

Coin Economy

Price Unit
