V-02.02.

The background of the image is a complex, abstract network diagram. It features numerous dark blue spheres of varying sizes, representing nodes, connected by thin, dark blue lines. The lines crisscross the frame, creating a sense of interconnectedness and depth. The overall color palette is a mix of light blue, white, and dark blue, giving it a high-tech, digital feel.

THE WORLD'S FIRST
FULLY DECENTRALIZED
WEB 3.0 - ALL IN ONE
BLOCKCHAIN BASE
ECOSYSTEM

WHY BLOCKCHAIN?

Current events show an urgent need for data privacy and protecting one's private data in the digital universe. This statement is not to create fear or lack of trust in our governments and institutions. Instead, it's an urgent message about promoting and protecting the right to privacy and the free development of every human being, in any sense. News headlines are dominated worldwide, with the activities of cybercriminals and the intrusions of large corporations on our daily lives.

Our team is dedicated to providing clear rules, transparency, and fair handling of your data and creating a trustworthy environment. We do not collect personal data where it is not needed for the service you consume and want. If there are no legal requirements we are as well not storing anything about your activity. If you delete your account, your data gets deleted after a period of 90 days and no back up will be held.

COMMITMENT TO CLIENTS

Our network and ecosystem should make everyday life easier. It should supply a technology which can be used for work, education or fun. ATROMG8 is meant to be a tool to break new ground and connect everything under one roof.

This includes our mission and determination to achieve our client's own goals. And our determination to deliver results to our clients. The team at ATROMG8 has taken up this challenge. We have dedicated our work and focus on creating a network of trust, privacy, and security.

THE ATROM COIN

Our blockchain and the ATROM Coin created on it are the key to all services on the ATROMG8 platform and associated ecosystem. Our partners buy the ATROM Coins from the exchanges and pay for the services they receive, settled in cents, with the ATROM Utility Coin. Additionally, we will accept other coins that are then exchanged for ATROMs. However, this process incurs added fees depending on the currency used.

Depending on the type of project or structure, fixed costs per account can be agreed upon to better suit our client's budget. The coin pays for the used or rented CPUs and RAMs, then credits as platform credits (APC).

In a short time, 85% of all coins (max supply: 84 million) will be distributed on the market, and the rest of the nodes will serve the purpose of stacking. The coins will be successively reduced and removed from the market from this moment on.

In this process, coins worth 10% of the transaction fees will be taken out of circulation until we have a maximum circulation quantity of 36.9 million ATROM coins. This process will not be linear, but will adapt to the market dynamics.

This is done to ensure a healthy development reduction and protect against extreme short-term price changes. Under certain circumstances, this process can also be paused.

OUR BLOCKCHAIN NETWORK

ATROMG8 NETWORK has launched its own blockchain, consisting of a modified version, a so-called customized proof of stake fork of the EOS blockchain. The blockchain is constantly being improved and further extended to meet the continuously changing requirements.

Before Proof-of-Stake, the most popular way to achieve a decentralized match or consensus was through Proof-of-Work, also implemented in Bitcoin. Proof-of-work is energy-intensive; by mining (or "making")

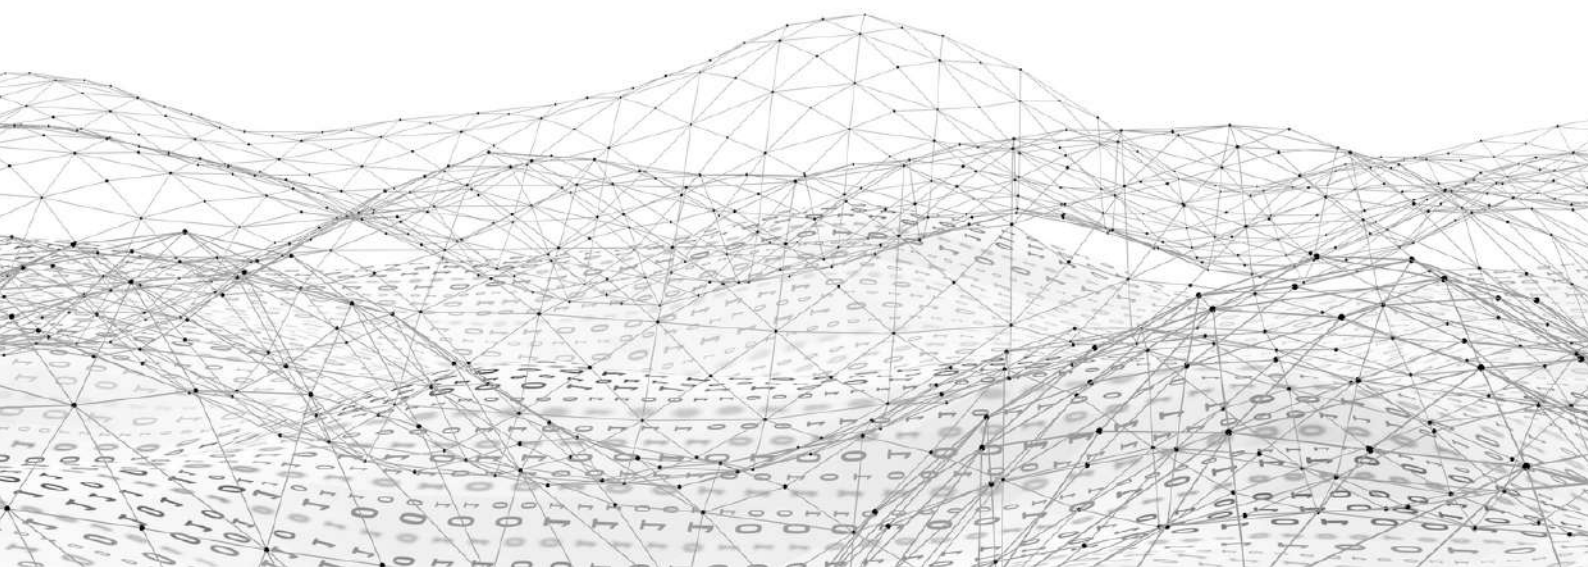

Bitcoins, we know many electrical energy resources are needed. Therefore, we have ruled out a proof-of-work solution for our project for environmental and sustainability reasons.

As the name suggests, node operators on a network put in a minimum amount of ATROM coins (Staking) to become candidates to confirm a new block and receive a fee. Then an algorithm selects the node that will ensure the new block from the pool of candidates. The algorithm keeps track of the length of membership and thus loyalty to the network. The longer the node is with it, the higher the probability of becoming the new validator and being allowed to confirm the new block.

ATROMG8 can include other blockchains on its own ecosystem and then settle them in ATROM using swap. The stable cost structure allows us to calculate our expenses precisely and offer them to users as another advantage. This is not as quickly done in blockchain technologies such as the cryptocurrency Ethereum. Large fluctuations in the cost of using blockchains have brought some firms to their knees in the past. ATROMG8 brings price stability to our partners.

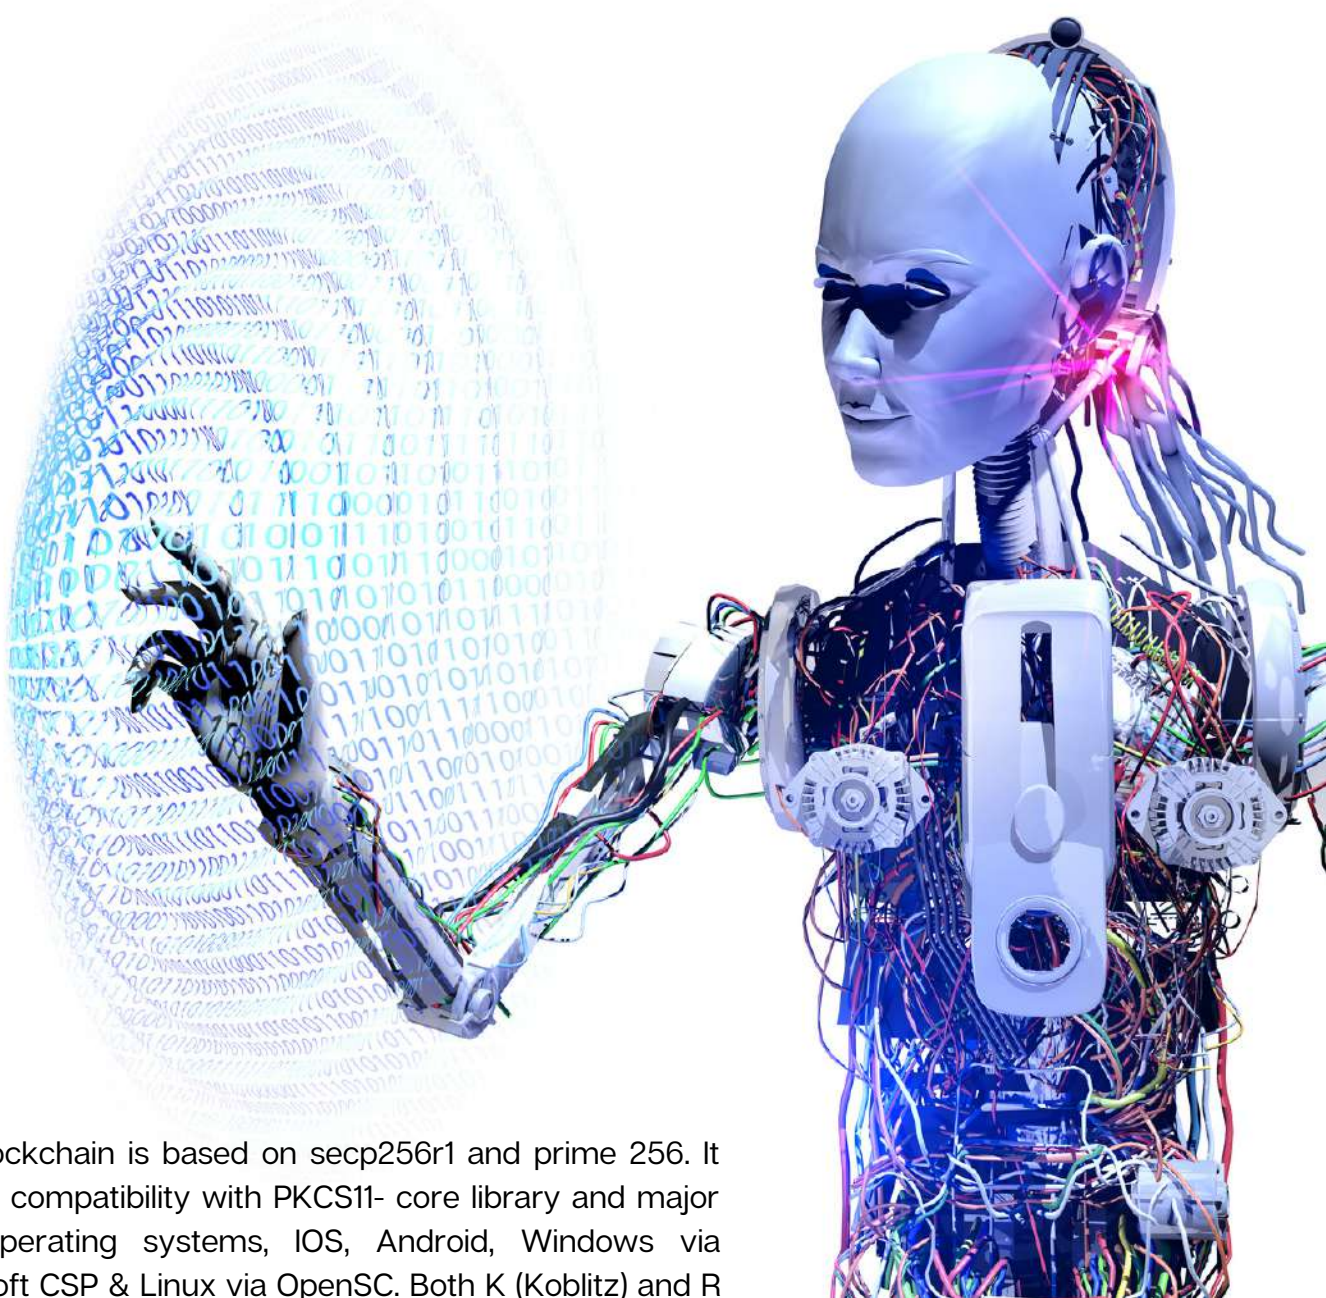

ATROMG8 is open to various other blockchains and technical structures. It can cleverly combine and implement them depending on their use. This allows us to access the blockchain network of Bitcoin, Binance Smart Chain or Polygon if requested by the client.

With a transaction speed of less than one second per transfer 0,27 Sec, "3000- TPS" and a performance of 180,000 possible transactions per minute, ATROMG8 is also one of the most advanced and powerful blockchain structures available.

READY FOR THE FUTURE

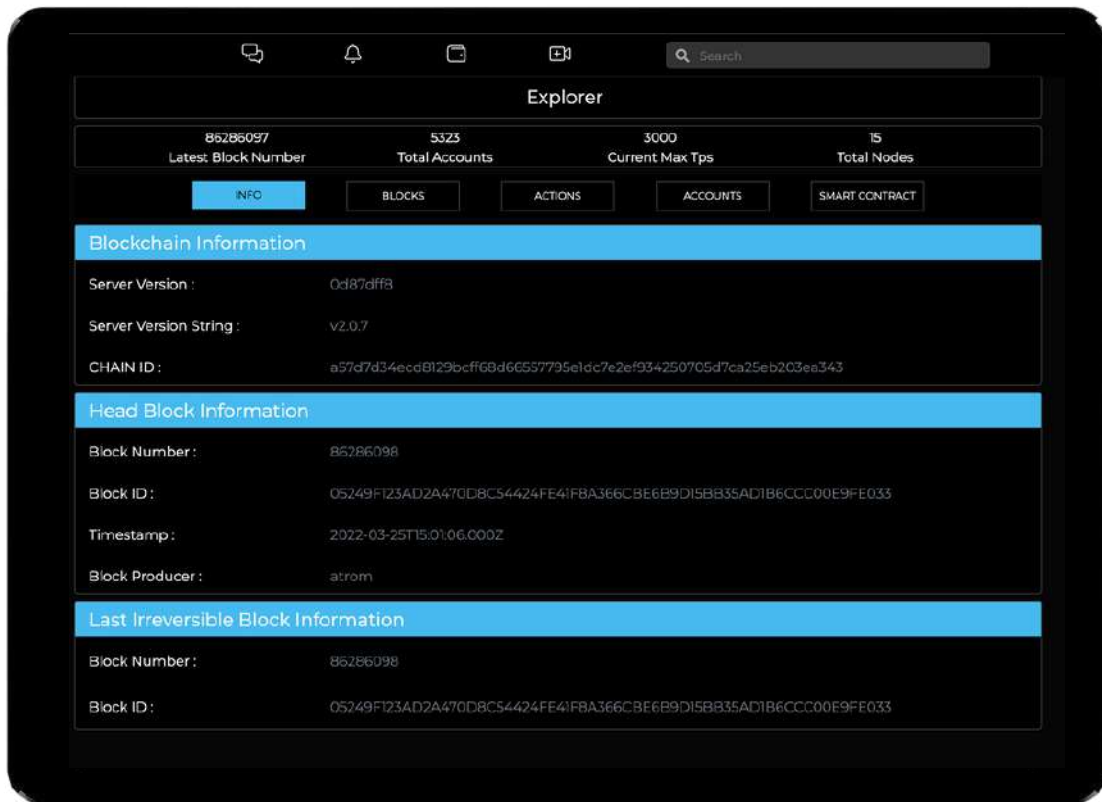

Looking toward the future, our blockchain is secure and well-positioned for growth. It is not only well protected by encryption technology and significant upgrades. Our system is verified by the stringent NIST ISO27001 guidelines and ready for a rapid upgrade from a P-256 to P-384 encryption to supply comprehensive protection against novel attacks related to quantum computing. This will become important in a not-too-distant future, when more powerful computers could compromise today's networks security-wise.

Our blockchain is based on secp256r1 and prime 256. It has full compatibility with PKCS11- core library and major CSP operating systems, IOS, Android, Windows via Microsoft CSP & Linux via OpenSC. Both K (Koblitz) and R (Random) elliptic curves are supported by our system.

Added features include an extension to the critical size proposed in P-384 that is directly achieved without building new blocks. This practice is already known in off-chain horizontal scaling. It thus eases the theoretical concerns about the security of a blockchain that arise from the statistical analysis of quantum computing.

OUR EXPLORER

Our explorer is integrated and visible on the platform. The transactions are available by mouse click and can be checked for their value. The explorer is unique in that only your own transactions can be viewed automatically.

The participant's information is needed to view or track foreign transactions in our system. This gives the participants in the network the necessary protection and security to work professionally with it and still create transparency.

This protection is essential for companies that do not want to show their sales publicly for security reasons. The active smart contracts installed on the blockchain can also be viewed and checked using an access code.

SOCIAL MEDIA FOR EVERYONE

It's difficult to conceive the ATROMG8 ecosystem without social media. Today's users require the benefits and joys of directly interacting, communicating, and sharing content and messages with each other. This is why ATROMG8 provides all the features and advantages of traditional social media and business communications. These include the ability for individuals, groups, and teams to create and share text, photos, videos, likes, and comments. Users can also participate in person-to-person and group or team-level text messages and video calls.

What sets ATROMG8 apart from classic social media and business communications is its complete rejection of all dopamine-generating mechanisms.

Instead of using these unhealthy and addictive strategies, ATROMG8 focuses on the absolute privacy, security, and safety of its users. In this way, ATROMG8 encourages conscious interactions between individuals, audiences, businesses, students, schools, and universities—allowing them to organize and communicate with the confidence that they are not being spied on or manipulated by advertisers.

Finally, ATROMG8 includes powerful tools for schools and universities to create protected accounts for students and children. Schools can set limits and controls on student accounts, supervise the activities and interactions of children, and shield children from any unwanted contact with strangers. At the end of 2022, ATROMG8 will introduce a worldwide communication, social media, and remote-learning network for schools and universities.

HIGH-SECURITY ENCRYPTED MESSENGER

Our integrated messenger lets you send and receive short messages with a decentralized infrastructure, distributed over different layers and multikey.

It comes loaded with various functions to create groups of all sizes that can be kept private or public or create information channels to inform your community.

The messenger has a unique end-2-end "salted" mix-net noise creation encryption mechanism that goes far beyond the security mechanisms available today.

VIDEO CALL

ATROMG8 has created a video call center on the platform to complete the communication options, which are easy to use and available to the network community without time limits. Digital technology has experienced unprecedented demand, as it allows face-to-face exchanges despite the social distance.

This is not only true for the many teams whose members suddenly work from home offices and are now faced with the requirement to stay in daily contact. In private life, too, people have become accustomed to using video communication and no longer want to do without it. We give you another alternative solution fully integrated into the ATROMG8 Platform.

MULTI-WALLET

The Multi wallet is a decentralized software provided to the user. This wallet can serve different blockchains and securely store their tokens and coins. This wallet can be activated on the platform, and the private keys are with the user.

Neither the platform operator nor the service provider has access to it or can intervene in case of loss of the private keys. No data is collected, and no backups are kept. The wallet serves to simplify purchases of products and services on the ATROMG8 NETWORK.

It currently supports the blockchains of ATROMG8, Bitcoin, Ethereum, Binance Smart Chain, Polygon, and the associated or based NFTs, Coins, and Tokens. More blockchains will be added in the coming months, and the offering will be expanded. It may be that not all functions can be made available in individual countries due to legal regulations.

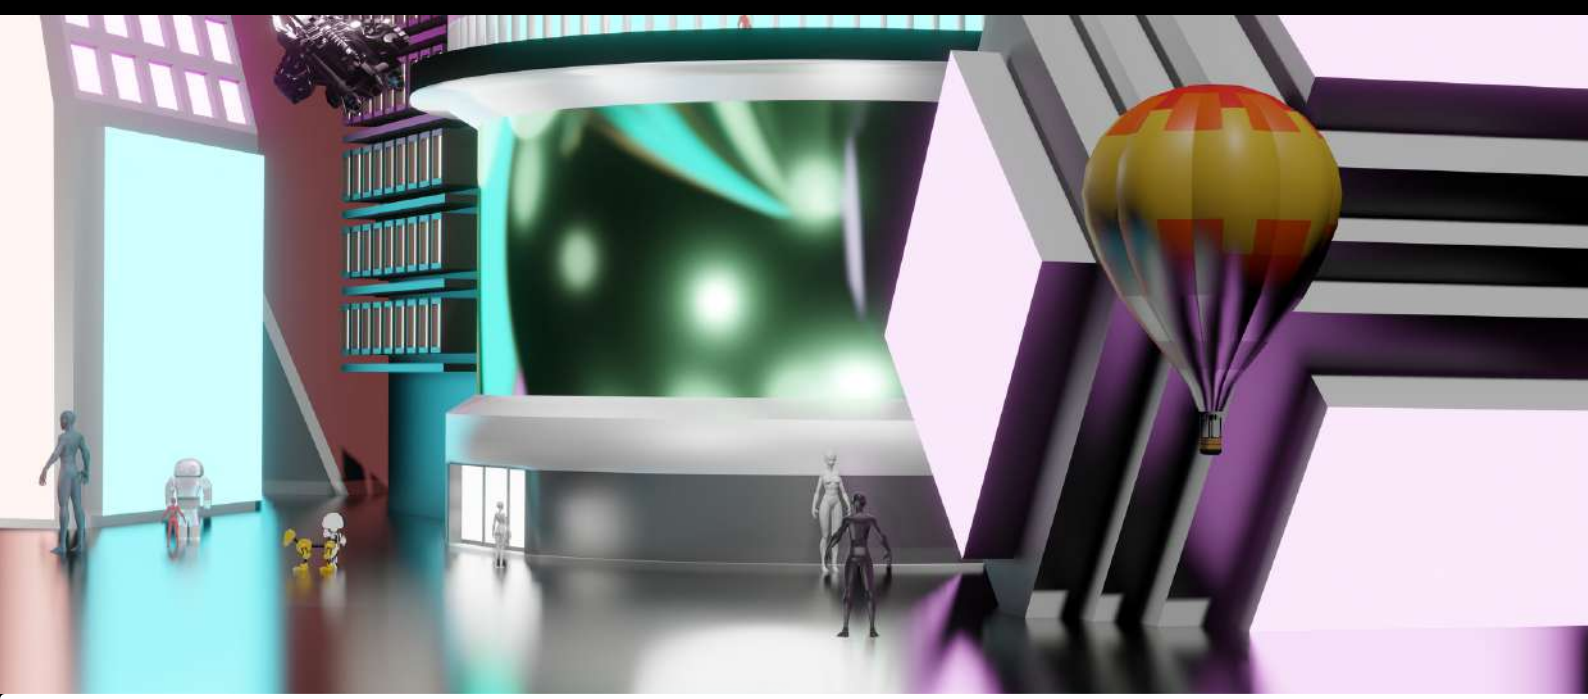

COINING8

BUY AND SELL CRYPTO

OUR ADVANTAGES

- Worldwide payment structure and partnership for buying and selling cryptocurrencies
- User-friendly
- Allows buying and selling cryptocurrencies within our platform securely, quickly, and reliably
- Complete transparency with every transaction
- Best-in-class KYC process with fraud detection
- Fully compliant with all types of KYC and AML regulations
- World-leading AI and identity experts
- Best conversion rate with simultaneous risk management
- 20+ cryptocurrencies
- 150 countries
- 20+ fiat currencies

METAG8

THE NFT METAVERSE AND GAMING ENVIRONMENT

NFTS AND METAG8 1.0. LAUNCH IN JUNE 2022

METAG8 is a digital environment. The 3D programming gives the user a sense of where ATROMG8 is headed. The goal is to create a fully integrated matrix that entertains the user without creating dependency. People should not flee from the real world but be inspired and informed, just as they would be when visiting a museum or exhibition.

METAG8 is currently a test environment that we are constantly working on improving and upgrading. Keeping up with global market changes, we're constantly adding new features to create added value for our users.

The environment will be available for selected companies on our platform at its start. A virtual reality environment will be created in combination with the output of NFTs and our own NFT trading platform that goes with it.

This will create an environment where people can buy, collect, or win NFTs. The first version will go live in the summer of 2022 and will serve as a foundation for future development to build upon.

THE NFT GALLERY

Our NFT Gallery and trading platform is being built into a closed environment. The idea is to protect the Gallery from an NFTs art flood. We will aim for 1 or 2 exhibitions per year. We will pick up only the best ideas and concepts. They will then be added to our "METAG8- Metaversum." And at the same time, make them available for free purchase on our own trading platform.

We have created the possibility to buy the works with different cryptocurrencies through cross-chain activities. The original work will be issued on our own blockchain and counter-confirmed with a hash ID through a second blockchain.

We want to pursue the concept of an art gallery. And build a name for us in the market. The Tate Gallery in London wouldn't be what it is if everyone could walk in there and hang their paintings on the wall and sell them.

We want to prevent that scenario on our platform, as it is already common on other platforms. More than 80% of NFTs do not get offers to buy, except for some fraudulent orders. We want to prevent that on our platform and support the utmost integrity by keeping stolen works of other artists from being sold.

The artist must prove his work to us, and everything must be right before we can create a project together. When talking about NFTs, many people talk about the great success of Beeple and other super sales. Hardly anyone knows that this did not happen overnight but was neatly prepared over many months. A tremendous amount of work preceded this success. This is the way galleries organize their exhibitions.

CROWDFUNDING

From raising funds to helping quickly to finance a project or organize an ICO, everything is possible on the ATROMG8 platform. It can be easily done in your brand's label and design.

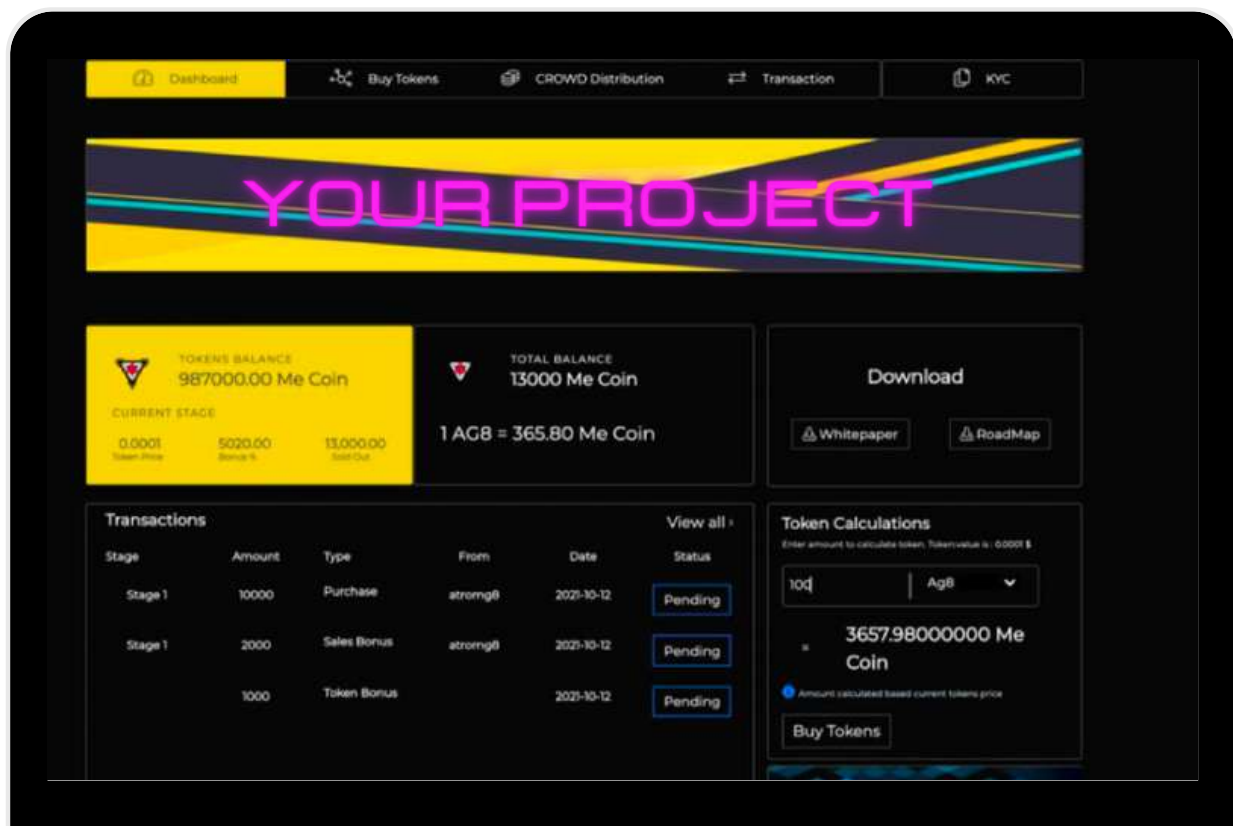

- Fully integrated with back office, social media, and ecosystem
- Optional integrated KYC / AML process
- Professional environment with over 100 tools and possibilities
- From sign up to coin sale in less than a week

CROWDFUNDING TOOLS

More than 100 elements help you implement crowdfunding professionally and cover every aspect of this work, from KYC to statistics and participant lists. All are available at the click of a button and clearly organized by topic.

You can upload your most important information like the whitepaper and information sheets. Everything is connected to the ecosystem and interactively linked to the community, from registration to sale within a week.

CREATE YOUR OWN CRYPTO TOKEN ON OUR BLOCKCHAIN

After you complete the sign-up process, which includes our know your customer (KYC) process. You have the possibility as a project owner to create your own token. This is done in a few simple and easy steps on the ATROMG8 blockchain. Clients can customize the interface with the look and feel of their brand, company, or style.

After the "minting process," the total available number of tokens will be visible on your main wallet. Only you have the private keys and no one else. Everything is decentralized and organized. You can control the distribution and transactions through a back office.

You can include different levels in the sales process, such as the available quantity in each price class, the time for the sale in each price class, quantity discounts, or the referral participation for recommendations with affiliate links.

You can manage and control the movements and the sales through a dedicated dashboard. Suppose it is fundraising and everything is completed successfully. In that case, you have the choice to stay on ATROMG8 or switch to another blockchain. This feature lets you take the pressure out of your project by quickly shortening the time to market.

This system saves you from programming structures in the early stages for a lot of money, which you then lack for marketing or project building. We can connect you with many professional service providers who will support you in every area. The costs are calculated according to the amount of work and the number of transactions.

ACCOUNT REGISTRATION TO SALE - IN LESS THAN A WEEK

We get you up and running fast. In less than a week. We can have you registered and selling on our platform. Once you have completed the KYC process, you will be allowed to activate your online showroom and e-commerce store and offer your products.

Our team will explain the functionalities of our platform in an easy-to-understand and informative online course. We will show you how to best use and set up the store to get the best results and increase your profits.

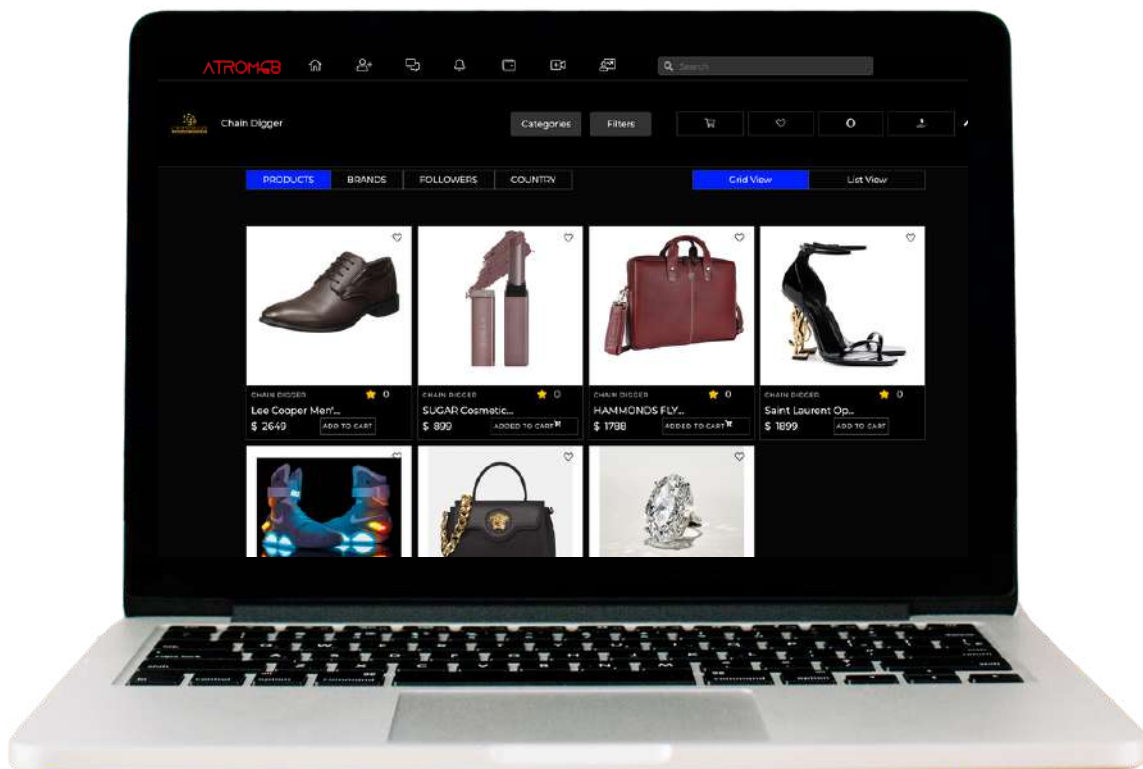

YOUR BUSINESS AND YOUR GALLERY

You can earn money selling your own products or those of a company on the platform by acting as a digital sales agent after going through the product training.

You can use different tools to get the best service for your customers, and the store can be customized to the look and color of your choice. We know the value of brand recognition and how important it is to keep a high level of service, from listing your product to the conclusion of the sale, payment, and delivery.

All steps can be organized, coordinated, controlled, and tracked via the platform and the back office.

You can create a community for your products and discuss the developments in forums. Or you can use this feature to train your teams. You can create sales teams that take part financially in the sales and thus open up added sources of income.

E-EDUCATION & CERTIFICATIONS

ATROMG8 created and programmed a simple but effective platform that covers all the needs to make a lesson successful. We took the difficulty out of conducting an online class. There is a multiple-choice test at the end of each course where the teacher can review the material.

A video room was created where the teacher sees all the students, but the students only see the teacher. This has proven to be much more effective as one is not distracted by the appearance of another student. Additionally, you can upload video material and workbooks and make them available to the course participants or students.

Our blockchain allows the school, university, or educational institution to issue tamper-proof diplomas and certificates. These can be uploaded directly to the student's account and verified for authenticity by third parties within seconds if needed.

The teaching platform can be designed with little effort with the student's own pictures and design. This creates unity between the real and the otherwise often impersonal digital world.

CHAIN OF LOVE

HELP VULNERABLE POPULATIONS

10% of all transaction costs and voluntary donations go to Chain of Love, our company's charity projects. The charity helps with human rights, helping animals, and the environment. We want to actively improve our world and exist in harmony while keeping a sustainable future.

OUR FUTURE

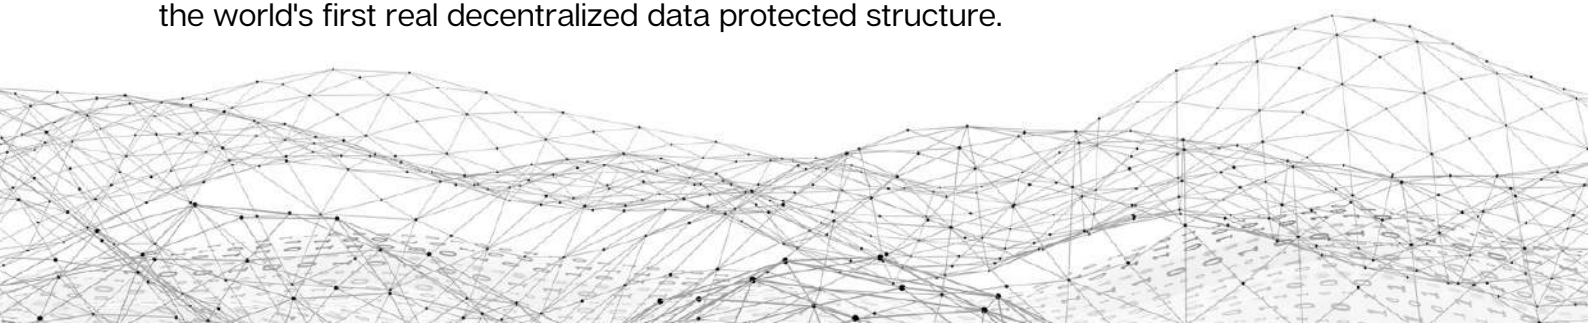

We have reached the final stage of building our ecosystem. Having released the beta version entirely for testing. With the addition of our NFT trading platform and its integration into our "Metaversum" version called "METAG8" and the completion of our iPhone application on Android and Apple's App Store, our first significant stage of development and launch will be reached. Other products will be added and integrated as we continue to grow with our clients with available resources subject to the legal requirements and regulations imposed.

The teams will then rework the functionalities and reduce the code to make the platform faster and remove potential errors. At the same time, design and linguistics teams will continue to adapt and add to the platform through the needs and demands of our users.

Our marketing team is working hard on a complete redesign of our style, branding, and communication. Additionally, we are finding institutional investors to support this phase financially and with capital for professional management, marketing, product improvement, and sales.

Our focus is to build our user base and empower our clients to succeed and grow. As our user base grows, it will increase revenues to help our development as partners with our users and vendors. We are also creating sales materials for all markets of potential customers. We want to attract companies, corporations, non-profits, schools, and universities to our network. We want the ATROMG8 NETWORK to be their network and the world's first real decentralized data protected structure.

DISCLAIMER

This whitepaper has been prepared for informational purposes. It is not a sales document, nor is it intended to promote or influence the sale of tokens on the ATROMG8 NETWORK platform. We compiled detailed information on the project's current progress and reflected on our knowledge. This information is incomplete, as the market situation or the project itself can always change. The documents are intended to create a better understanding of the work of ATROMG8 NETWORK and its various teams and provide a better understanding of the goals and the individual products on the platform.

Should you decide to take part in this project in any way, the contract drawn up for this case will be valid. The signature or digital acceptance will replace all other agreements, indications, and previously made information. This white paper in no way stands for a relationship or commitment between the reader and the author or any other company presented or listed in this informational brochure. Content and details are subject to change based on market and development; The author may change individual parts or remove them completely without further specification or justification. The latest documents and information can be found on the official website <https://ATROMG8.com>.

ATROMG8 NETWORK assumes no legal liability arising from the accuracy, reliability, schedules, or completeness of Contributors, and potential ATROMG8 NETWORK participants, partners, or community members should seek proper independent professional advice before engaging in any material commitments or transactions presented in this document.

This document is not an offer of any kind, nor does it imply an offer of securities. The ATROMG8 Token and Coin "AG8" is a service token "Utility Token/ Coin" and is used solely to offer services and information or to obtain or receive them in various forms in the ATROMG8 ecosystem. Platform ATROMG8 NETWORK is not a registered broker, trader, or financial advisor and does not perform any actions or services or provide any registration or order-related services that require authorization.

DISCLAIMER

There is no guarantee of the success of any project or potential revenue generation. No warranties or representations are made about any project's successful development or implementation, technology, innovation, or results. All warranties implied by law or otherwise are now disclaimed and excluded. Trading and dealing in cryptocurrencies may not be suitable for everyone.

ATROMG8 NETWORK and its own coin, the ATROM "AG8," is a digital services-based platform. It is a part of a complex Crypto based network built on its own technical structure. Although we make every effort to ensure that the platform and its components work flawlessly and smoothly, we face some challenges. For example, data may be lost or destroyed due to hacker attacks. There is never 100 percent security for this.

From a technical point of view, however, the network is absolutely secure at the present time and is one of the best in the world. Nevertheless, it is essential that we inform about possible dangers, even if the probability of a successful cyber-attack on our platform is vanishingly small. We would like to alert potential participants in the network to be well informed, look for professional, expert advice to fully evaluate the potential threats and risks. You are not eligible and may not buy ATROMG8 COINS "AG8" if you are a citizen or national of a country where the acquisition of ATROMG8 COINS "AG8" is prohibited by applicable law.

This applies to violations of ordinances, regulations, laws, guidelines or rules that are applicable within your national, valid legal system. If this is the case, you have the choice in some participating countries to buy vouchers for credit points which will be credited to your account but cannot be exchanged for coins or transferred off the platform. Again, this may not be offered in all regions of the world. All written and oral forward-looking statements attributed to the project and network or individuals in this company or derived from individual parts of this documentation are covered in their entirety by this whitepaper. This also means that they are to be understood as assumptions, which are in no way guaranteed.
