3**. Introduction**

All crypto currencies came from the true premise. For having value, many people should want to have them. However, somebody think that this striving should be maintained for many years. Striving is based on purchasing power of a cryptocurrency generally and token particularly. On the other hand, any

crypto currency A or B also needs to be used in order to have value. So it must be accepted in most financial or commercial transactions; this means that this crypto currency must be used in any type of trade or business, for example in stores, supermarkets, airlines, vehicle purchases, buying stocks, buying real estate, etc. This calls usability.

It is necessary to build an ecosystem in order to occur already described usability and desirability events; that is a group of people, companies and institutions who wish to participate by accepting, exchanging or storing crypto currency A or B as a valuable instrument.

All crypto currencies want to create their own independent ecosystem, that is not cooperate among themselves, some of them even believe that with the help of their ecosystem they can monopolize all global financial transactions, but none of them offers to work together to create an ecosystem for the common use of crypto currencies.

More and more projects appear every day. At the same time, it is more and more difficult to find information on each project individually. The reason is that they copy each other and do not offer anything new for ordinary crypto enthusiasts. New technologies have facilitated the creation of a large number of small, medium and large financial platforms, which have enabled new users and financial transactions in small and medium groups. This creates a struggle between traditional and new financial platforms, since traditional ones have a large number of infrastructure and personnel that become unproductive and incompetent, unlike the latest technologies that create a new financial industry.

Our project called BeforeCoinMarketCap aims at uniting all crypto activists and enthusiasts around the world on one platform. It will allow each crypto activist to learn all relevant information on certain tokens in one place. Each registered and verified user of our platform will be able not only to view information on

the tokens that interest them, but also to give an announcement on those tokens that are absent from our database, or their status has already been changed. Each correct announcement will be rewarded.

For this purpose, we have created a team of professionals who will always help and advise you on any issue regarding our platform.

4. **The essence of the project (briefly the crypt will be used)**

The essence of the project BeforeCoinMarketCap is a product that has no analogues in the crypto currency world. The platform developed by us will occupy a market segment that will audit and track existing and newly created crypto currencies. The uniqueness of our project is that we give our users the opportunity to earn in a few clicks. Our unique platform working with each user individually we have created by combining information from several sources, such as: CoinMarketCap, Ethplorer, Etherscan, etc. You will no longer have to track each token individually. Visit our platform and simply enter the address of your wallet, you will get all the up-to date information about your tokens. In case that you do not find any information on your tokens from your wallet, we suggest you should create an announcement and earn tokens from our project.

For these purposes, we are creating our crypto currency (BCMC1), which will serve for payments for digital and physical assets, as well as for certain actions within our platform:

- Paying for correct community crypto forecasts - Voting
- Bonus payments for participation in promotion and competitions of crypto community
- Software Development.

- Ads positioning in apps.

- Staking.

- Referral system.

At the first stage, work on our platform will be carried out with the wallets of the Ethereum block chain. In the future, we plan to include platforms such as EOS, TRON, XLM, etc. in case of their active development.

5. **Introduction to the current affairs state in this sphere**

Today, there are tens of thousands companies on the market that have their own crypto currency and new ones are emerging. It takes a lot of time to track where they are traded, when the day of listing is, or to switching to another block. Everyone knows that when a token begins its journey, it is still very shaky. Large changes can occur immediately after listing and it is far from fixed price indicated in WhitePaper. As a rule, CoinMarketCap (CMC) does not audit novice tokens due to low trading volumes, but they are already trading and show certain results in the market. It happens that while the token will be issued on CMC, it is already traded on 5 exchangers.

It is far from a secret that in the crypto currency space, and on the Internet itself, they say "dishonest money circulation." How does this happen? Almost all crypto projects come to the intended goal thanks to the crypto community and crypto enthusiasts participating in various actions, airdrop, bounty, etc. Which make them the main advertising, thereby increasing the demand and liquidity of the product offered.

However, not all crypto companies play the game. Many deliberately deprive their crypto community of the earned money, despite the fact, thanks to them, they succeeded. How does this happen?

Thanks to the crypto community and its active actions, they sell as many of their tokens as possible, but they are trying to conceal or not especially advertise the date of the beginning of token listing on the exchange. Companies that have nothing except beautiful pictures do this have empty promises, as a rule, their main task is listing. If they report the listing to anyone who bought or earned their tokens, they will not be able to get the maximum benefit.

Thus, it turns out that simple crypto enthusiasts serve as a means to achieve their goals, and those tokens that they earned, spending their time, or acquired are simply depreciated. It also happens that some companies are initially weak or potentially not in demand in the market, but at the same time existing projects held the next action with an attractive reward for participation. Of course, active participants in the crypto world do not pass by; they spend a lot of time advertising these projects on their social networks, etc. In turn, these companies, after listing, the date of which they hide, can lose thousands of percent in the value in one day and that the token will return to the declared price in WhitePaper can no longer be said.

BeforeCoinMarketCap is a platform that offers solutions to all these problems. It is designed to track the initial placement of coins and audit existing tokens. You do not have to view a huge number of tokens to find your own among a heap of channel announcements. Just enter the address of your wallet, and you will receive full information for your tokens, and the tokens on various exchanges you can fix on your panel. Traders will experience the usefulness and benefit of our project. Everyone can build his or her own strategy.

We reward our users with valuable information and tokens of our own eco system. The platform is free of charge; you only need to undergo simple registration and verification. This gives you the right to announce, and soon

it will be possible to vote for the tokens you like. For each announcement approved by our administrators, project participants will receive a fixed fee with our internal token, which you can sell or purchase. You can also earn money on our platform using a referral system. Being registered, you will receive a unique referral link that will give you the opportunity to earn by joining your family, friends and acquaintances.

6. **The goal of our project, its relevance**

The goal of our project is time saving. Creating a BeforeCoinMarketCap platform will help you not only save time, but also earn money in the crypto currency market. At the first stage, the project will be abbreviated "beta." This is due to the fact that during the implementation of WhitePaper there will be added some updates to a particular part of the system. By the time we finish working on WhitePaper, our platform will switch to the main version.

Our team objectives are:
- Daily filling of the platform with information about existing and newly created tokens.
- Application processing announce.
- Processing of withdraw requests.
- Processing KYC requests.
- Processing Support requests.
- Development and launch on the "People IEO" platform   TOP SECRET
- Development and launch on "All" platform

- Development and launch on the "Best Deal" platform

The social significance of the BeforeCoinMarketCap project is that each participant in the crypto currency world can save his time and receive maximum income for his work or contribution made to the development of any projects that relate to the crypto currency. In addition, this way they positively affect the entire assessment of the crypto industry.

7. Project Description

The direction that we carry out has no competitors. The only similar project that exists now is CoinMarketCap, but they are not our competitors. They perform the task of tracking tokens that have a large trading volume. Nevertheless, crypto enthusiasts and crypto investors already know these

tokens because most of them are already traded on the stock exchange and all airdrop, bounty and ICO projects have long been completed.

Our activities are primarily aimed at an individual approach to each crypto enthusiast and crypto investor. We will monitor and receive information from the crypto community about those projects that are just starting their way in the crypto currency world.

Also, any user of ours will be able to find out information on their own entire tokens platform by entering the address of his wallet in the special field. If there is no information on any of the tokens located in his wallet, the registered user can find the correct information on this token and make an announcement on it on our platform. If the announcement proves correct, and our administrators confirm its correctness, then in this case this user will be rewarded by the tokens of our eco system. Thus, we offer saving not only your time, but also saving the opportunity to earn money with us. In addition, all the information that will be

posted on our platform will be interesting to investors. While investing in young startups, investors very often face with the fact that they lose time for daily checks of certain tokens and news on them. Our platform makes it possible to save this time.

Research and survey done through a number of platforms Instars.com and other official airdrop channels showed that the idea of saving time would significantly increase the crypto activist's portfolio. Users will have more time for new research and promotion of new projects, which means significant increasing the chances of earning.

Because time is the most valuable resource in the life of any person, we conclude that our project is necessary BeforeCoinMarketCap in the crypto currency world.

Our platform performs the tasks of primary tracking of tokens and all information on them. Also with the help of our platform, each registered user will be able to give announcements on all existing tokens and only beginning their way in the crypto currency world. We offer our users the opportunity to earn and grow together with our project.

The functionality of the platform is as follows:

a) Possibility to submit announcements. (Announce).

b) Ability to view all relevant token information contained specifically in each user's individual wallets. First, this means significantly reducing your time to search for, track, and act on tokens.

c) Staking tokens of our eco system. (staking).

d) The possibility of voting for the best projects that come out on a particular block chain. (Best deal). TOP SECRET

e) In addition, in the future our platform will vote for people IEO (People IEO). TOP SECRET

8. **Tokens and the financial model (why we will be successful, the distribution of tokens, work with tokens that will be, carried out during the project)**

1) The result of our project is saving your time and earning money. We have created our own crypto currency (BCMC1) for these purposes. It will allow us to reward active project participants and attract new users.

### The total issue of tokens 10.000.000.000 BCMC1

2) The total volume of issued tokens will be 10.000.000.000 BCMC1. The starting price per token will be $0.01 USD. At the ICO stage, we plan to sell 15% of the tokens of the entire 1.500.000.000 BCMC1 issue, in case not all tokens are sold, the rest will be burned.

3) About 7% of the 700,000,000 tokens BCMC1 will be, spent on Airdrop and bounty. In case not all the tokens are distributed, the remaining part will be sent to the general wallet for the community.

4) Team payment + PRE ICO investor will be 13% 1.300.000.000 BCMC1. These tokens will be placed on 3 wallets and will be blocked for 3 years.

In the first year, 10% of the total number of tokens will be unlocked, which will be 1.3% of the total token emission. For the second year, another 20% of tokens from the remaining 90% will be unlocked. In the third year, the total number of blocked tokens will be 50%. Thus, Team payment tokens will not enter the market in large volumes and will not waste the BCMC1 rate on the exchange. This show that the goal of our project is not to enrich the team at the expense of investors and crypto enthusiasts. We want to give everyone the opportunity to earn money and look forward to many years of cooperation and rapid growth of our project. The remaining 60% of the BCMC1 can be earned with the help of announcements submitted on our platform, the referral system, as well as participating in the staking of our tokens.

5) At the first round of ICO, the starting sale price will be 0.0015 per one token BCMC1; the total number of tokens sold will be 400,000,000 BCMC1. The second round of ICO will increase the price to 0.0031 per one token BCMC1; the total number of tokens sold will be 600.000.000 BCMC1.
In the third stage of sale, the price will be 0.0041 per one token BCMC1, the total number of tokens sold will be 500,000,000
BCMC1. Thus, the investors of our project will have the opportunity to earn from 2.5x to 12x since the early sale start. There will also be the possibility of staking our token from 1 month to 12 months.

6) Staking will be carried out from $100 in tokens BCMC1. A smaller payment will not go through. It will be possible to incest your tokens for 3 months and the reward will be 4% of the invested funds. For 6 months, the reward will be 9% of the number of embedded tokens. During 12 months, the reward will be 21% of embedded tokens. After the expiration of staking, tokens and percentage on them will be automatically transferred to the wallet from which the token were contributed.

7) The token is based on the Ethereum platform ERC-20

8) At the token sales stages, we expect to attract investments for $3.999.990 Hard cap, 1.800.000 Minimum Cap. In the case of Hard Cap, the project will develop much faster. With Min. Cap project will develop, but slower. First, the raised money will go to the development of the project. We plan to put the first money raised to finalize the platform and expand our team for better work. Purchase of equipment and additional job creation to serve our users is also planned. 60 % of the investments raised will be in a stable fund for

the purchase of tokens in case it falls to a certain level after the sales start. Thus, we will maintain a certain balance and will not let our token fall rapidly. This is an additional plus for the investors of our project. The remaining amount of attracted investments will be used to develop the roadmap project.

9) The total capitalization of the crypto currency market today is approximately $400.000.000.000 and continues to grow gradually. Due to the current situation in the world, we believe that the popularity of crypto currencies will only increase and the number of projects coming out on various platforms will increase. US financial institutions are already on the path of adoption crypto currencies. According to Chainalysis experts, recent events in the United States show that regulators are actively preparing for the mass adoption of digital currencies and expect financial institutions to realize their exposure and reduce the risks. The Office of the US Currency Controller (OCC) said that US banks could provide customers with crypto currency storage services, as well as store reserves in stable coins. In view of the foregoing, we believe that the relevance of the project BeforeCoinMarketCap will only grow.

The main task of our platform is the unification of all crypto activists on one platform. For it, we plan to collect the most up-todate information every day on all projects that are somehow associated with the crypto industry. First, we are interested in information about the initial placement of a token on the exchange. At the same time, we intend to monitor and record changes in tokens that have long been on the market and have sufficient fame in the world of crypto currencies. Every visitor will be able to benefit from our platform. We show those tokens that are traded on the exchange and have at least some opportunity to be sold or bought. While they are listed on the exchange, we show them.

9. **Conclusion (results, repetition of the goal, objectives, relevance of this project, payback and benefit of investors.)**

The goal of our project is to create a popular platform for auditing already existing tokens as well as those which are only planning their initial placement. We are creating a platform that has no analogues today in the world of crypto currencies and will be useful for all participants in the crypto currency world. We created a team of professionals. They will help you every day to track your tokens and to post your forecasts events of the crypto industry on our platform. The relevance of our project now can be evaluated by every crypto enthusiast who daily encounters the problem of finding the necessary information on certain tokens that are stored in his crypto currency portfolio. Our project gives you the opportunity not only to save your precious time, but also to make money on it. The benefits for the investors of our project will be very significant. The aim of our project is not only to benefit from purchases at the ICO stages; there will also be the possibility of staking the token of our eco system (its structure is described above). In the future, at the launch stage of People IEO, it is planned to buy off tokens that are already traded on exchanges and then burn them. In return, it will lead to an increase in the exchange rate BCMC1 and at the same time will result in additional income for the holders of our token. The number of tokens that will be issued for submitting correct announcements and attracting people by referral link will be regulated, depending on the market price BCMC1 and will be equal to a certain amount in dollar equivalent most of the time.

According to the roadmap of our project, we intend to present several technical solutions that will be implemented on the same platform for the first time.

Nevertheless, in order to protect against plagiarism, we cannot reveal to you all our plans.

One of the first such solutions will be People IEO, which we will present to you in the second quarter of 2021. After that, we intend to launch a quarterly purchase of our tokens from the community on those exchanges where we will be represented. Thus, we plan that the price of our token will only rise and bring profit to investors, as well as participants of our project, who will keep our tokens in the Stakes. The next big stage of our project will be "All" which will be released in the 3rd quarter of 2021. In this part of the updated project, we plan to begin auditing tokens created on all existing platforms. Thus, we plan to expand our community, as well as simplify work with tokens of other block chains for crypto enthusiasts.

Best Deal part of updates of our project will take place in the 4th quarter 2021 and it will be a novelty in the world of crypto currencies.   Our platform i **TOP SECRET** unique. First, it is aimed at work with crypto enthusiasts, the most active part of crypto currency community. Every day we work for people and thanks to them, unfamiliar projects can become popular and successful. Daily run of Airdrop and bounty of the company becomes harder over time. When you have more than several hundred coins in a wallet, it is problematic to trace the beginning of the auction on each of them. It often happens that you know the time and start date of the auction only when you accidentally come across some announcement. It means you only waste your time, forces and money.
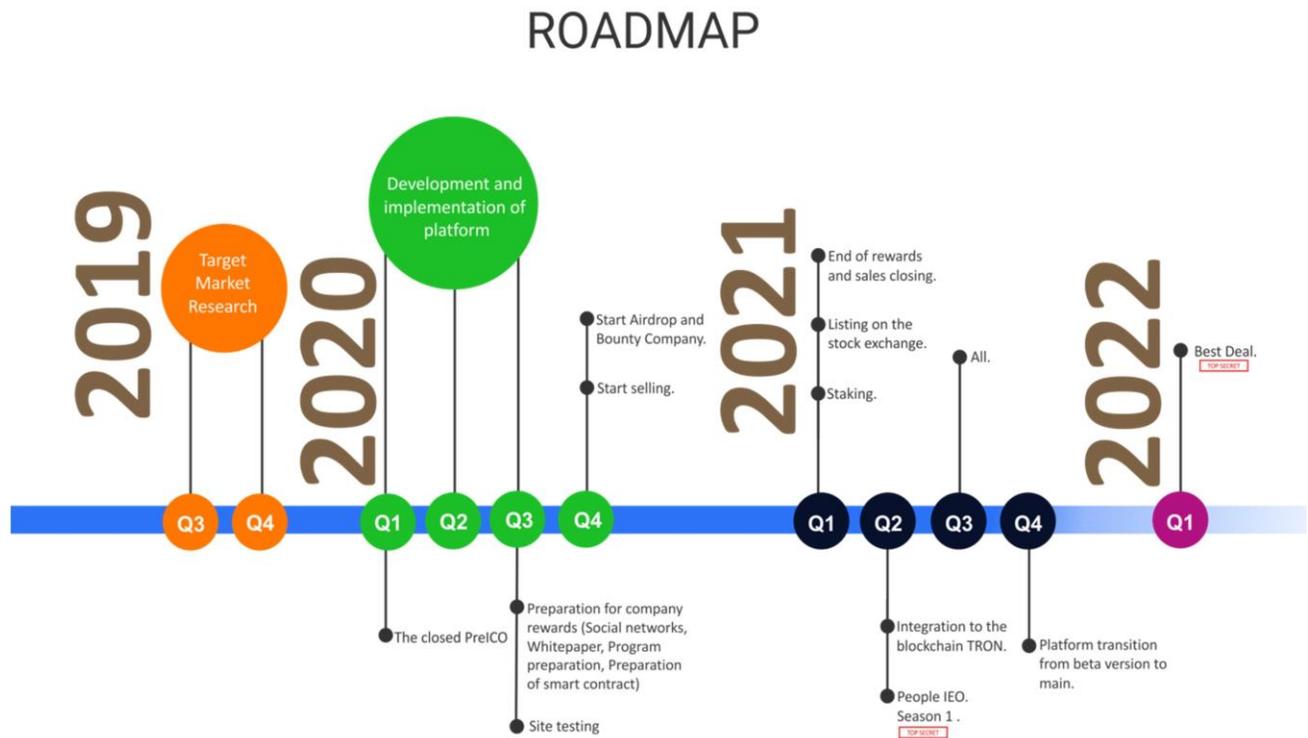

We offer you the modern platform that will meet all your requirements for searching and tracking coins on your wallets. You no longer have to look through daily a heap of announcement channels to find the latest information on your tokens. Just visit our platform, enter data of the wallet and all relevant information on your tokens will be on your screen. In case you do not have any information on your tokens, there will be a new opportunity to make money by submitting of the announcement. The development of any project depends on

target audience. We consider our target audience to be the most numerous and active in crypto currency community.

We work for the future and not for instant enrichment. You can look in the smart contract 0X... about it. Team payment will be 13% 1.300.000.000 BCMC1. These tokens will be placed on 3 wallets and will be blocked for 3 years. In the first year, 10% of the total number of tokens will be unlocked, which will be 1.3% of the total token emission. For the second year, another 20% of tokens from the remaining 90% will be unlocked. In the third year, the total number of blocked tokens will be 50%. Thus, Team payment tokens will not enter the market in large volumes and will not waste the BCMC1 rate on the exchange. This show that the goal of our project is not to enrich the team at the expense of investors and crypto enthusiasts. We want to give everyone the opportunity to earn money and look forward to many years of cooperation and rapid growth of our project.

We have far-reaching plans and in the near future, you are waiting for 2 more novelties under the label (Top secret), see the Road map. Due to the risk of plagiarism, we conduct all developments in the strictest secret. We are confident that these innovations on our platform will help a lot of crypto enthusiasts replenish their capital.

10. Project Roadmap

ROADMAP

We specifically indicate in the roadmap not a specific date, but a quarter. Due to the unstable situation in the world (COVID-19). In order not to postpone the launch dates of each stage of our platform. Before the launch of each stage of the roadmap of our platform, we will announce in advance.
