INTRODUCTION

Abbreviated from decentralized financing, DeFi is an umbrella term for a variety of applications and projects within the blockchain space, aimed at disrupting the world of traditional finance. Inspired by blockchain technology, DeFi is called financial applications built on blockchain technologies, based on secure distributed ledgers similar to those used by cryptocurrencies. The system removes the control banks and institutions have on money, financial products, and financial services. Some of the main DeFi goals are reducing the time of transactions and increased ease of access to financial services.

DeFi is designed to use cryptocurrency for transactions. The technology is still developing, so it is difficult to determine precisely how existing cryptocurrencies will be implemented, if at all. Much of the concept revolves around stablecoin, a cryptocurrency backed by an entity or pegged to fiat currency like the dollar.

In a decentralized world of cryptocurrencies, it's just normal, and fair, that Exchanges are decentralized as well. That's why, anyone, nowadays, can launch any project and simply list it with Exchanges. This is called a token launch.

If you've ever participated in a DeFi token launch, you're probably aware that early buyers can make a lot of money. Because of the buy pressure that a well-publicized launch produces, prices can jump to tens or hundreds of percent above launch price in minutes. Obviously, the earlier you arrive, the better your chances of receiving a good deal. However, sitting by your computer, ready to place an order as soon as trading begins, will only get you so far. Your reaction time, internet speeds, and mis-clicks ultimately hold you back. We automate the entire process of getting a buy in as early as possible.

Our team has developed a multi-chain trading platform with unrivaled features that will level the playing field for common investors in the DeFi market.

In the frequently cutthroat economy of Decentralized Finance, the ordinary investor faces various difficulties. These include a lack of early information about new projects, insufficient data on the safety of investing in tokens at an early stage, the inability to monitor investments 24 hours a day, seven days a week to protect against rug pulls, and a lack of investment tools that successfully compete with professional snipers and crypto whales. We aim to break down these obstacles by providing a suite of integrated trading services to our users, allowing them to make faster, safer, and smarter trades, increasing their chances of profit.

We are an experienced team of professionals dedicated to changing the way DeFi is done, undoing the damage brought across diverse blockchain ecosystems by dishonest developers, and restoring investor confidence in decentralized finance.

The envisioned trading platform is being built to provide cross-chain services, with the goal of leveling the playing field for all decentralized finance players. It has features that protect investors and equip them to trade more intelligently, with greater market awareness.

Because of the fast loss of trust in the DeFi space, we decided to create a platform that would allow all investors to use the same investment tools.

TradersClub.App will provide access to the following tools:

1. The BULLET SNIPER – for a fast and safe entry or exit
2. Telegram bot for scraping launches
3. The Wallet Guardian – keep your assets safe from rug pulls of any kind
4. Trading Platform – trade with lowest fees and have access to buy/sell orders(just like trading on a CEX)
5. Copy trades – similar to CEXes or other trading platforms
6. Untraceable trades – for those that want to make sure bots can't copy
7. Alerts
8. AnonFinance – loose trace of a wallet's funds
9. Launchpad – fair or stealth
10. NODES Platform – passive income system for BULLET holders

The BULLET Sniper

Investors that hold a specified amount of tokens will be granted access to the BULLET SNIPER which will place them on par with the best snipers in business. Based on the volume of the holdings, multiple functions will be enabled within the Sniper's utilities, such as:

- honey pot checker – a great tool that won't allow users to jump into a honeypot at launch
- true mempool sniping, either we talk about added liquidity or other functions enabling the contracts
- rug pull protections, that keep your assets safe
- autoselling options, with huge ways of creating rules, from simple take profits or cut loss, to future price drop predictions
- auto detection of absurd fees or blacklisted blocks
- frontrunning of different mempool events, and much more...

**AND THAT, WITHOUT
EVER ASKING FOR
YOUR PRIVATE KEY!**

To facilitate token trading on a pair, the team will typically add liquidity to the pool at a predetermined time, which is commonly referred to as a “launch.”

The Sniper waits for this transaction to be published to the blockchain before placing a buy order in the same block with the launch, usually before any manual buys have a chance. The user, than, can sell at a time that is convenient for their trading plan.

It performs instant analysis of the contract code for every token as soon as it's deployed in the blockchain network, even before it's available for trading on an AMM like Uniswap or Pancakeswap, by reverse engineering the target token's Solidity bytecode, so investors don't have to wait for the contract owner to publish the source code.

Other data points include:

- the balance in the owner's wallet,
- transaction tax for buy & sell orders (identify potential honeypot tokens before they are launched),
- slippage required for successfully executing token transactions
- max transaction limits imposed by the contract creator for various reasons, including anti-whale measures,
- max wallet size permitted by the target token contract
- contract functions identifying when its owner adds liquidity and permits token trading.
- the number of dead blocks at launch, identifying the first safe block for trading.

TELEGRAM BOT

This is a special designed addon for the sniper, that enables users to buy a token once it is mentioned on Telegram. The technique is known as Telegram Scraping. Once the sniper buys the token, all the other functionalities are instantly available, just like on mempool sniping!

THE WALLET GUARDIAN

AND THAT, WITHOUT EVER ASKING FOR YOUR PRIVATE KEY!

Not all your assets are safe coins or tokens! Some of them are shitcoins, or fresh launched tokens. It's well known that some might be subject to scam. Why not keep them safe?

Our built-in mechanism of the App, offers users the option to guard their assets.

In case a scammer tries to rip you off, our App dodges their intentions.

Here are some scam examples explained:

Honeypot

Scammer launches a token that allows people to purchase but not sell, either immediately (aka an instant honeypot) or some time after trading begins (aka a delayed honeypot). After the honeypot has run long enough, the scammer uses one of several techniques to drain the chosen currency from the liquidity pool, usually by swapping the LP tokens, minting more tokens then selling, or perhaps calling a custom function in the smart contract to transfer investor or even liquidity pool balances to themselves (aka a Balance Swapper).

Balance Drainer

This is one of the most dangerous scam techniques! The scammer adds a custom function to the smart contract that transfers holder balances to an address the scammer controls. It is used/enabled at the scammers wish, or automatically from the smart contract! The scammer can simply sell any amount from the wallet he wants, draining the pool slowly or simply by dropping it all.

Rug pull

Scammer launches a token, then adds initial liquidity, and waits for people to purchase the token. Once the scammer is satisfied with the amount gathered within the pool, they remove/pull out liquidity, leaving innocent investors holding a worthless token.

Some suggest to wait for liquidity to be locked, but modern scammers use different techniques to fool honest investors, even slow rugging. Some, are described below.

Hidden Mint Function

Scammer adds a function to the smart contract that mints an amount of additional tokens, usually over the current total supply. The scammer then dumps that amount into the pool, leaving the investors with a token without value.

TRADING PLATFORM

If you're only getting started, we suggest only using a small amount of investment, to get used to the features. You'll simply need to connect your wallet, and pre-approve any tokens you'll be swapping.

You will benefit of the lowest taxes available in the market, will have the option to place buy or sell orders, just like on any CEX but the most important fact is, that you won't miss anymore entries or exits with this tool!

Also, you will find other very useful tools within the trading platform. Some of them are described bellow.

COPY TRADES

Many influencers have decided to start trading themselves. A lot of other professional traders already share their trades and portfolio!

What if they decide to share their trades? And what if you are able to copy them, and let them work for your wallet? Of course, in both interest, as you will share a fee, or a percentage of your win when you close the deals

UNTRACEABLE TRADE

One of the issues that influencers or traders have, is frontrunning bots! They face themselves forced to see themselves outrun by bots, so their buy price increases a lot, or even worse, their trades fail, while using low slippage.

Now, we provide them a solution. But you may have it as well. You can now trade without being frontruned!

ALERTS/CALENDAR EVENTS

How many times have you missed launches? Or other important events like IDOs, private sales or presales?

With our tool, you will be able to organize your time and space more efficient! You will be able to plan even your snipes and be alerted!

ANONFINANCE

Let's face it! We are all here because of financial freedom. And that means anonymity! But still, sometimes wallets are easy to trace!

Still, we provide you a solution so that your funds are withdrawn without a trace. You'll have your own fresh funds!

LAUNCHPAD

Scams and scammers have ruined this ecosystem! But we all think it's enough! NOW, you all have a tool to compete with others while talking about launches. But now, we will provide you a safe environment in you wish to launch your projects. This also adds the community exposure, that comes like a huge benefit as market exposure!

Of course we will recommend KYC and Audits with us, but feel free, and understand that even without those, a project that is launched through our platform won't be able to rug!

Dishonest devs or teams will never launch their projects with us!

TOKENOMICS

* note that numbers here are informative ones, and they are all related to the total supply and NOT to the LP supply!

Private Sale	167,000,000.00
Presale	141,750,000.00
Liquidity	81,000,000.00
Unlocked	50,150,000.00
Marketing	29,700,000.00
Additional Liquidity, CEX listing Tokens	330,000,000.00
Burned	200,000,000.00

Good to know:

The BULLET Taxes mechanism

1st Hour: 7% Buy TAX and 25% Sell TAX

2nd Hour: 7% Buy TAX and 20% Sell TAX

FINAL: 10% Buy TAX and 10% Sell TAX

ROADMAP

Q4 - 2021

- Development start
- Sniper Testing
- Anti HP & Rugpull development
- Additional functions development
- Starting the App development
- Design, UI&UX
- Microservices

Q1 - 2022

- Token Concept
- Whitepaper
- Website launch
- Beta App Reveal
- Snipe Platform reveal
- Telegram buy
- Private sale launch
- Beta App Launch
- Initial marketing start

Q2 - 2022

- Presale launch
- Token Launch
- App Launch
- Limit Buy/Sell
- Advanced Scraper
- Copy trades
- Alerts system
- Private Sale System
- Referral system

Q3 - 2022

- Untraceable trades
- Swap integration
- Financial anonymity
- The Launchpad
- Stealth launch platform
- Telegram bots
- Market prediction

Q4 - 2022

- iOS and Android launch
- Swap2.0
- MultiSignature Wallets
- Alerts integration with all Calendar systems
- API development
- The Bullet Website
- Fiat purchase

Q1 - 2023

-
