

# BURNINGMOON

WHITEPAPER

THE MOON WILL  
NEVER BE THE SAME AGAIN

# WHAT IS BURNINGMOON?

BurningMoon is a hyper-deflationary reward token with multiple use cases. It features unique tokenomics to create and sustain an entire ecosystem, which makes it very different from the tokens that are usually entering the cryptosphere.

BurningMoon is the result of three months of research and development, followed by a full pre-launch audit. This dedication guarantees to make our token safe and successful in the long term.

One of our test tokens "EarnADA" sparked the entire wave of "earn"-coins with its countless copies and forks. Our next token "BabyDot" invented a new type of fair launch providing a high liquidity and security against Snipers, Bots, Whales and Dumps.

No other team in the cryptosphere has this track record. Rainhard, our main developer earned himself an immaculate reputation in the crypto scene.

Instead of launching half-baked follow-ups to cash in on his success, he and our team of highly experienced individuals sat down and developed BurningMoon.

We are determined to make this token moon beyond anything that has been seen before.

Join us on our journey through the BurningMoon Universe!

BURNINGMOON

# KEY FACTS

- **HIGH REWARD SYSTEM**  
BurningMoon provides all holders a passive income earned from every transaction. Just hold and earn BNB and other tokens.
- **ANTI-DUMP MECHANICS**  
Frequency and amount of token to be sold is limited per wallet. This protects the community from massive dumps. (variable)
- **SACRIFICIAL TOKEN**  
Holder's can burn their tokens to double their rewards. This incentive will drive up the value of all holders. A true win-win and a first for any token out there.
- **SECURITY BY DESIGN**  
BurningMoon was coded from scratch by Rainhard, a well known developer, and extensively refined through the feedback and test of our team. We issued several test tokens to adjust our tokenomics and ensure that everything is secure and works flawlessly.
- **PRELAUNCH AUDIT**  
This token is already audited. We passed with a high level of confidence. You can read the full report here:  
<https://audits.solidgrp.io/burning-moon-audit/>
- **COMMUNITY ORIENTED AND FAIR**  
We strive for a transparent, trustworthy and fully community driven token. We have a fair launch with zero team token or dev wallets. We are all in this together.
- **TEAM DRIVEN**  
Our Team consists of experienced and dedicated individuals. We listen to our community and will reward individuals to push BurningMoon through contests and votes.
- **NO PHONEY ROADMAP**  
Instead of listing blurry goals our team will expand our ecosystem from the get go. First step will be a Lottery to add even more value to our tokens.

BurningMoonBSC

# TOKENOMICS OVERVIEW

- 1.000.000.000 Token max supply
- 10.000.000 Token max hold ( = whale protection)  
[ 500.000 Token max sell for Launch (variable)]  
[ + 2h sell lock after each sell for Launch ( = dump protection)]

- Taxes (variable)
- Distribution (variable)

10% Buy  
20% Sell

40% Staking  
40% Auto LP  
20% Burn

These values are variable and can be modified to accomodate the situation.

## Promotion Token

One special token to claim.  
-> More info in Promotion Token section

## Rewards by holding

You can claim any token available on BSC.  
-> See rewards section

## AutoLP

Liquidity is generated through every buy and sell.

## Burn

BurningMoon will have multiple mechanisms to burn  
-> More info in burn section

## Whale Protection

The Max wallet size will be 1% of the total supply. It will be possible to exceed this limit, but once a wallet reaches it, you can't buy on pancakeswap anymore.

## Dump Protection for Launch

You can sell a maximum of 0.05% of the supply at a time. That means a whale at max wallet size needs to sell 20x to dump his bag. Additionally, all sells have a 2 hour cool-down period.

## Marketing Tax

A part of each transaction gets converted to bnb and will be used to pay for marketing and development costs.

# TOKENOMICS IN DETAIL

BURNINGMOON

## Token Burn:

We burn a lot of tokens to reduce the supply and enhance scarcity equally for all holders.

This seems to be a better choice than the implementation of a reflection rate as many other projects did, which is in fact feeding large whales every f\*\* day with a bunch of tokens.

As our name indicates, we plan to burn a lot of tokens - this is BurningMoon, finally .

## Marketing Tax:

The marketing tax is designed for expenses and we want it to flow back to the community in many ways, e.g. as a reward for participating.

It will also allow us to pay for advertising, AMAs, freelancers or anything else which may help us to fuel our rockets on our flight to BurningMoon.

The marketing tax enables us also to have zero team tokens, which means that nobody from the team can dump millions of tokens upon the market.

## Auto Liquidity:

BurningMoon has a lower threshold that triggers AutoLP more often based on the circulating supply. This avoids massive dumps whenever liquidity is generated. The auto-generated Liquidity Pool is directly locked into the contract.

## Auto Staking:

Staking is done automatically for you, meaning that you can just keep BurningMoon in your wallet and claim your rewards in BNB whenever you like! It's frictionless and straightforward.

## Anti-dump protection for Launch:

It is not possible to sell more than 0.05% of the total supply at once, and there is a time-lock of two hours, preventing anyone from selling repeatedly. (variable)

## Anti-whale protection:

No single wallet can hold more than 1% of the total supply.

The maximum wallet size at launch is 10 million token. The only possibility to exceed 1% is through compounding.

# TOKENOMICS

## - REWARDS / TAX

---

BURNINGMOON

### Rewards

There will be multiple rewards to claim that are generated based on volume.

1. BNB
  2. Burningmoon: can be compounded tax free!
  3. Whatever your heart desires: Seriously... Any token you wish can be claimed! Be it ADA, Bitcoin, BUSD or "BabyElonMoon Inu", as long as it's available on BSC, it can be claimed!
  4. Promotion Token: a special Token that will change and can be chosen by Community vote. -> Full detail on Promotion Token page.
- 

### Adjustable Tax

This allows us to adjust the tax rate to fit the current situation, e.g. right after launch there will be a higher Liquidity Pool injection, which shall prevent extreme price fluctuations, combined with a high token burn rate, which will create a quickly rising price floor.

- The adjustable tax rate is capped at 25%, which means, it can never exceed 25% total tax.
- It is aimed to reduce to more reasonable levels over time.
- Tax rate changes can be initiated by Community vote.

# TOKENOMICS - PROMOTION TOKEN

---

## Promotion Token:

This is our exclusive special feature.

Beside the multiple tokens you can claim we will have Promotion tokens.

Claiming this token will come with benefits depending on the current token like:

- Tax free claiming.
- A percentage of free tokens based on the claimed amount.

Holding the Promotion token will come with bonuses like:

- A tax reduction on buying and selling BurningMoon
- A small amount of free BurningMoon to claim if you hold the Promotion token.

To push the Promotion token even more we will deposit these to the contract so that users will get more of these.

The Promotion token will enable us to partner with other projects in a mutually beneficial way. We will only partner with projects that we have extensively researched and have which are safe.

This will give us huge marketing opportunities and makes BurningMoon much better suited for the long term.

# TOKENOMICS - BURN MECHANISMS

BURNINGMOON

BurningMoon burns clean and without any residue.

The burn directly reduces the circulating supply.

There is no burn Wallet with tokens waiting to be manually burned.

BurningMoon will have multiple mechanisms to burn. Let's take a look:

- 1. Burn on Transfer:**  
On every transfer a percentage of the amount will get burned.
- 2. Sacrificial Burn:**  
BurningMoon will incentivize holders to burn their token.  
Holders who burn their tokens will receive 2x the rewards. You can burn any amount you like and receive double the rewards for the amount you burned.
- 3. Lottery:**  
To incentivize additional burns, we will provide a Lottery.  
You can acquire a lottery ticket by burning a set amount of tokens.  
The more you burn, the more tickets you receive. The winner of the Lottery will win a large amount of BNB.
- 4. NFT Trading:**  
There will be a unique NFT trading system that will burn most of the fees in BurningMoon tokens. The NFT trading system will be released in a later milestone.
- 5. Buyback And Burn:**  
There will be occasional burn events where marketing fees will be used to buyback BurningMoon and burn them.

**LIQUIDITY:** 96%  
96.000.000 Token

**MARKETING:** 4%  
4.000.000 Token

4% Vested in Contract (max 0.5% daily)

BURNINGMOON

# SECURITY

BSC, as we know, is full of scams and rugs, therefore, security of a token is a major concern for investors.

How will BurningMoon ensure the best security for investors?

1. Audit:

Burning Moon has been fully audited before launch.

All "owner" functions are restricted so that we can't do things like set the tax to 100%.

2. Liquidity Lock:

The liquidity pool (LP) will be locked by a proprietary lock in the contract that both locks initial liquidity and auto liquidity.

This lock both ensures maximal security and still enables us to migrate liquidity to other DEX and CEX. (e.g. Pancake Swap v3)

How that lock works:

Our LP gets locked through our contract for a given time.

When the LP unlocks, the team can only withdraw 20% of the liquidity and migrate it. The rest of the liquidity automatically gets locked for another week.

This makes sure the team can never remove all of the liquidity, but still allows it to migrate parts of the liquidity to other exchanges.

As we intend to remain open to the versatility of other smart chains.

3. No Team Token:

There will be 0 team tokens and just a small quantity of tokens reserved for marketing kept in a multisig wallet.

4. Sacrifice for the Team:

We will sacrifice a small amount of tokens when deploying the contract.

We will distribute those burned tokens at launch to our launch team. Launch Team members will benefit only from the rewards the sacrificed tokens will earn. This means the team will only be paid according to the success of the project.

This ensures that everyone works for the success of BurningMoon and guarantees that no member of the team can dump their tokens on the market.

- DApp

# THE FUTURE OF BURNINGMOON

BURNINGMOON

Most projects in the current market are "pump and dumps".

People stopped asking "wen moon" people have started asking "wen marketing", as they stopped aiming for the moon. We aim to be different, and building a rocket takes time.

How are we going to achieve that?

## 1. Community:

Building a strong community that will actually support the project, as the best project in the world would be nothing without a strong community. The community can contribute actively to our growth and we aim to give back to them with contests, which reward creativity and ingenuity.

## 2. Utility:

BurningMoon has a very strong use-case that is integrated into the core function of its smart contract. The use-case will enable us to partner with many other projects and teams. The project will also be able to adapt using its advanced code to change with the marketing conditions.

## 3. Transparency:

We will communicate as much and as clearly as possible either through AMAs, Telegram and social media.

## 4. NFTs:

The team is developing unique NFTs with a true utility that can be traded automatically (we won't release NFTs just for the sake of it).

Most of the fees used to buy the NFTs will be used to buy-back and burn BurningMoon. The NFTs won't just be for collectors, their functionality will be both an asset and a tool. These NFTs will have the ability to crossover to other partnered projects and add value to both simultaneously. More details on this will be given in the near future;

## 5. Sustainability:

We are heading for the future and aiming for swift but considerable progress.

With its unique tokenomics and the big committed team, everyone knows so well already. BurningMoon will bring profit, fun and excitement, especially to early and faithful investors.

Through constant improvements, marketing rewards and incentives, we are in this for the long haul.

BURNINGMOON

# HOW TO BUY

## Download & setup MetaMask or TrustWallet

Download MetaMask  
(a crypto wallet in the form of a browser extension)  
or TrustWallet (an app for your phone).

After that you will have to add the Binance Smart Chain  
to your network-list.

You can find a step-by-step tutorial here:

<https://academy.binance.com/en/articles/connecting-metamask-to-binance-smart-chain>

Buy and send BNB to MetaMask

Buy BNB on an exchange (i.e. Binance, Kraken, Coinbase etc.).  
Transfer your BNB in BEP20 format to your MetaMask wallet address.  
You may need to use a Bridge or transfer from an Exchange which  
supports BEP20, e.g. Binance.

BEP-20 addresses start with a "0x".

Head on to PancakeSwap and swap for \$BURNINGMOON

On PancakeSwap and use this address;

0x97c6825e6911578A515B11e25B552Ecd5fE58dbA

to select BURNINGMOON.

Set the slippage tolerance to 10-12% (sometimes it may be 20%,  
depending on the demand and the variable taxes).

Swap BNB for BURNINGMOON. Now you need to add BURNINGMOON  
to your MetaMask or Trust Wallet to be able to see your \$BM in  
your Wallet. Otherwise you can also view your tokens on BscScan.

Lastly, HODL for rewards, lottery and much much more...

# DApp Tutorial

Go to [burningmoon.finance/app](https://burningmoon.finance/app) and connect your Wallet.

<b>0 BM</b>	Shows the total amount of your BM tokens.	<b>My Rewards: 0</b>	Displays the accumulated rewards of your Shares in BNB. You can claim whenever there are BNB earned.
<b>COMPOUND</b>	Here you can buy BM tokens with your rewards -> tax free! Best way to accumulate.	<b>My Shares: 0</b>	Displays the percentage of your rewards related to the total reward distribution. It is calculated by the amount of BM and Sacrificed tokens you hold.
<b>BNB</b>	Claim BNB with your rewards. -> taxed		
<b>CLAIM PROMO TOKEN</b>	Here you can buy Promo Token which is visible on this page.  It enables additional bonuses for buying and selling. e.g. tax reduction. More info on Promo Token Page.	<b>Claim any token</b> Enter token address <b>CLAIM</b>	Here you can enter any token adress that is available on BSC. It will be bought with the BNB of your earned rewards. -> taxed

	<b>0 BM</b> <b>COMPOUND</b> <b>BNB</b> <b>CLAIM PROMO TOKEN</b> Wallet:	<b>My Rewards: 0</b> <b>My Shares: 0</b> <b>Claim any token</b> Enter token address <b>CLAIM</b>	<b>Promo Token</b>  EarnADA is a new generation of autonomous frictionless yield farming protocols. Hold EarnADA in your wallet to earn ADA.	<b>Symbol</b> BM The BurningMoon token ticker symbol.
				<b>Market Cap</b> \$1,212,265.41 The actual Marketcap.
				<b>Liquidity Pool</b> 461.175 The height of the Liquidity Pool.
				<b>Token</b> 0x97c6...8dba The BurningMoon token contract address.
				<b>Volume (7d)</b> \$1,903,133 The Volume of the last 7 days.
				<b>Total Payouts</b> 84.863 The total Payouts of the rewards.
				<b>Total Transfers</b> 8,328 The total Transfers that have been made.
				<b>Liquidity</b> \$444,864 The Liquidity in \$.
				<b>Sacrificed Tokens</b> 204,577,192 The total amount of Sacrificed Token.

<b>Sacrifice Token</b> Enter Token Amount <input type="text"/> <b>SEND</b>	Sacrifice: Burn BM tokens permanently and get 2x the rewards.  For every BM token you burn you receive two „Sacrificed Tokens“. You can't sell them, but they will earn you twice the rewards forever.	<b>Play Lottery</b> 1000 tokens per ticket <input type="text"/> <b>SEND</b>	Every now and then we will draw one lottery winner to win the prize, that has been accumulated by the contract.  For buying lottery tickets, you must burn the given number of BM tokens. In this case 1000 tokens for 1 ticket.  We will than draw the winner in an event and the prize pool is immediately sent to the winner.  After that you need to buy new tickets for the next lottery draw.
<b>Price</b> \$ 0.0013908 	Shows a chart and the actual price of 1BM token.	<b>Holders</b> 1,152 	Shows the amount of actual holders of BM tokens.
