

VERSION 3 JAN 2022

Abstract

Thirteen years after Satoshi Nakamoto forever changed our perception of digital currency with his seminal whitepaper, "Bitcoin: A Peer-to-Peer Electronic Cash System", Catoshi Nakamoto is setting out to change the face of Decentralised Finance (DeFi).

Catoshi is opening the door for any cryptocurrency project to smoothly and effectively add high value utility for token holders — proving, in the dawning age of DeFi, that innovative projects can operate with the powerful backing of a proactive, highly engaged community.

Cross-chain interoperability is a function needed for current projects to survive the future of cryptocurrency. That is why Catoshi is being placed at the forefront of this new wave of projects.

Mission Statement

Exploring the limits of cross-chain interoperability.

To add powerful utility to cryptocurrency projects while rewarding \$CATS holders with high annual percentage yield (APY) farming and staking via our unique cross-chain bridge.

Introduction

Traditional, centralised systems, stifle creative development behind closed doors and often, the largest members in the system have the most to gain. Blockchain technology sparked an emergence of ideas and allowed more individuals to gain access to opportunities once closed off.

Over time, interoperability has become the key to accessing multiple advantages and further propagating great ideas to the masses. Unfortunately, we have been slowly moving towards a world where larger entities with resources stand to gain the most from tapping into the potential within several blockchains. Opportunity should be awarded to everyone, and creativity should never be barred behind a paywall.

The world of crypto has brought about myriad technologies, all offering a unique advantage, attracting different types of users.

At Catoshi, we aim to bring the blockchain to those who dare to dream, bridging their ideas to numerous ecosystems filled with potential. We believe in the goal behind blockchain technology, primarily the decentralisation of ideas and power across systems. We aim to provide creative individuals the access to spread their ideas across multiple blockchains. This allows them to interact with flourishing ecosystems, unlocking new utilities, and providing solutions for the masses.

5 amazing products utilising the Catoshi Token

LIQUIDITY SOLUTIONS

PAIR YOUR TOKEN WITH CATS

the crossing bridge easy

the **crossing**

Utility, safety and innovation are central to The Crossing, Catoshi's cross chain bridge. The Crossing allows tokens to seamlessly operate on various EVM chains such as BSC, ETH, AVAX, MATIC and FTM. It enables low-cost transfers while:

- 1. Allowing staking and high-APY farming via our decentralised exchange partners.
- 2. Increasing token demand as supply is locked in these farms.
- 3. Allowing those who find the Ethereum gas fees unreasonable to purchase tokens elsewhere.

As Catoshi grows and expands its research and development, the Crossing will also grow. This will offer bridging options not limited to EVM chains.

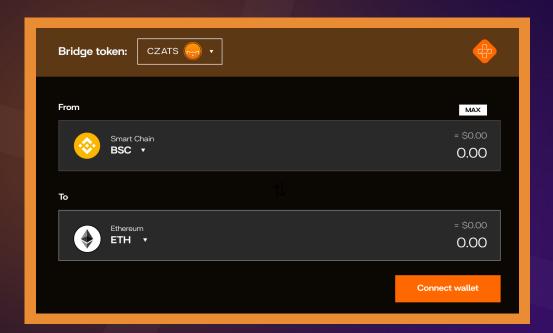

The Crossing provides a pathway for any token to venture into various chains such as ETH, AVAX, FTM, MATIC and more. This will open a host of new possibilities, such as partnerships with a wider range of projects and access to a larger investor base.

The Crossing is making it simpler than ever for any project to provide token holders with high-APY farming and staking. We are partnered with the elite teams at PADSwap and Shiba Fantom and will continue to find additional partners on each chain as we grow.

At Catoshi, we offer a smooth delivery mechanism, allowing projects to connect and integrate properly with the new blockchain ecosystems we introduce them to.

Bridge Easy

The smooth, sleek and easy to use UI design makes bridging easier than ever. The layout shows clearly which token you are bridging and the chains you are bridging between. Just select the dropdown bridge token to choose which token you would like to bridge. Moreover, each project will have their own unique URL, directing users straight to their token on The Crossing.

~

WHITE LABEL

BRIDGING

BRIDGING

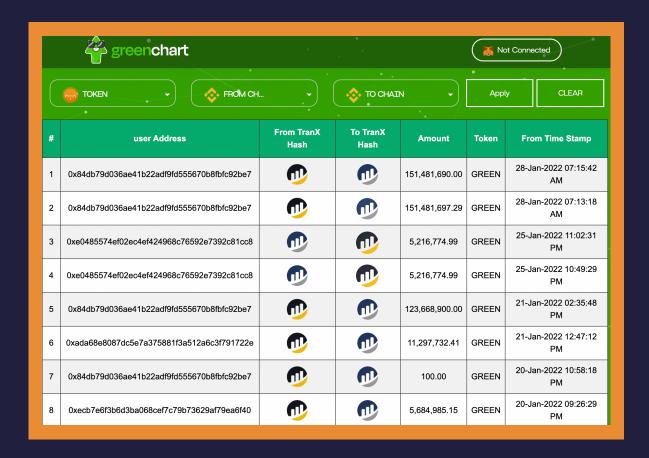

Catoshi also allows larger projects the opportunity to integrate their own personalised bridge portal through our white label bridging solutions. A bespoke bridge, designed to fit the projects' branding and themes. This includes all the features from The Crossing itself.

BRIDGING

We can also redo existing UIs and branding through this side of the project, and even redevelop projects' websites. Everything is integrated into the projects' website with their own servers and their own transaction page showing all movements on their bridge. (Shown above)

LIQUIDITY SOLUTIONS

PAIR YOUR TOKEN WITH CATS

LIQUIDITY SOLUTIONS

Sometimes it can be difficult to pull in enough liquidity when launching on a new chain. As part of the bridging process Catoshi provides tokens to be paired with the projects' own. This will increase the liquidity that they are able to add onto the new chain.

The new created LP will be locked by the Catoshi team for a year. As your project and ours grows, so will the amount of liquidity, higher liquidity can attract larger investors. This can also counteract token dumps by larger holders.

Catoshi

Catoshi's cross chain bots are the best way to keep track of a bridged project!

Catoshi's bots allow projects to see their prices, contracts, commands, Social Media, buying and command lists all with a simple click of a button.

Pulling all the data from each chain for holders to easily see estimates of things like, market cap and holders across chains. These are notoriously difficult to find accurately via other means for bridged projects.

KISHIMOTO NINJA **** XX ETH \$KISHIMOTO = \$0.000000000486851 **HODLERS = 12052** \S BSC \$KISHIMOTO = \$0.000000000582086 HODLERS = 2698 § FTM \$KISHIMOTO = \$0.000000000529733 HODLERS = 22 § AVAX \$KISHIMOTO = \$0.000000000459042 HODLERS = 35 BSC HIGH PRICE = \$0.00000000582086 **TOTAL HODLERS = 14807** ATH = \$0.000000000582881 ORIGINAL SUPPLY = 100,000,000,000,000,000 **10** TOTAL BURNED = 52,875,593,092,101,400 CIRCULATING SUPPLY = 47,124,406,907,898,600 👸 EST. 11:11 AM

The bots can draw information from multiple chains including charts and number of holders.

These can be used on telegram or discord.

Token Utility

All Catoshi products bring in money via \$CATS or \$CZATS, the Catoshi products include The Crossing, White Label bridging, Liquidity Solutions, and Catoshi Bots. As these are purchased on the open market by teams it will continue to drive the price up while decreasing and locking up supply. All CATS collected will be placed into a pool to be staked by holders.

- For every crossing that we sell, a donation of 10K CATS to our staking pool is purchased on the open market by the team whom we are bridging.
- For every White Label Bridge a donation of 25k CATS to our staking pool is purchased on the open market by the team whom we are bridging. Optional extras can be purchased where a team can reduce their fees by purchasing 75K – 100k CATS.
- The liquidity solution locks up CATS and pairs them with our partners. We will match whatever number of CATS (up to 50K) they purchase from the market to boost their liquidity.
- Catoshi bots are sold and teams are required to pay in CATS.
- As time goes on, Catoshi token stakers will earn a percentage of all bridge fees generated.

^{*}These prices are subject to change based on the token value

All tokens that are donated for using our products will be moved into our staking pools.

This provides a great system for increasing Catoshi's value, whilst rewarding the community. When staking goes live, the community will be able to stake our NFTs and tokens in order to earn more Catoshi tokens.

The buy pressure put on our charts from projects buying will then be given back to the community through these staking pools!

These pools will be implemented through the crossing in conjunction with the Catoshi NFT series. This is all part of the increase in utility of the Catoshi token.

Catoshi Staking aims to go live within the next 2 months, more information on staking and NFTs will soon follow.

Farming options are also live and operational with high APY LP farms available on padswap.exchange courtesy of our partners at TOAD.

The Catoshi Token

With the implementation of The Crossing, Catoshi will be available on various chains, including BSC, ETH, FTM, AVAX, MATIC and more in future! Our tokens have different attributes on different chains showing our flexibility and opening more options for holders.

The Catoshi ticker across all chains will be \$CATS, except for Binance Smart Chain, here the ticker is \$CZATS as a fun nod to the founder of the chain CZ.

Catoshi Governance

We love, appreciate, and believe in the towering power of community. As such, \$CATS will function as a governance token, allowing the project to achieve decentralised status. Initially, the community of \$CATS holders on the Ethereum blockchain will function as the first members of the DAO, THE KEEPERS OF THE CROSSING.* Initially, The Keepers will be able to vote on the following:

- -Fees & Distribution.
- -Integration of prospective chains.
- -Bridging prospective tokens.

Continued community involvement and discussion will be a critical part of Catoshi.

Catoshi (\$CATS) holders

Voting rights on The Crossing

ERC20

CATS was launched on Ethereum with an initial supply of 21 million (designed to match the supply of BTC), subsequently this was burnt down to our current total of around 11 million, with its own twist on the classic RFI code — rewriting the code from scratch to include a 6% tax (3% redistribution to holders, 2% burn, and 1% to a charity wallet).

Due to the 2% burn, the already-low supply of CATS is decreasing; and due to the 3% redistribution, holders are able to watch their own holdings grow.

CATS trades on Uniswap.

BEP20/FTM20

The Catoshi token has a 0% tax on both FTM and BSC. Buyers are able to trade freely without worrying about losing out to tax. This is a welcome respite from all of the high tax tokens on the market currently.

CZATS trades on PADSwap's pioneering platform, with opportunities available for holders to further benefit from their DPLP farms with high daily yield.

CATS (FTM) trades on Shiba Fantom and Spooky Swap. With the opportunity to farm CATS/BNB LP to earn BONE tokens on Shiba Fantom.

AVAX and future chains

CATS will be added to future chains that are integrated to The Crossing, including AVAX, Polygon and others. CATS will have the same tokenomics on each of these chains, with a 3% tax. The breakdown of this being – 1% marketing, 1% development, 1% auto LP.

We feel adding this small tax to all future chains will help us improve and grow the project.

Catoshi Charities

The importance and value of helping others remains a key part of our belief. No matter the business or industry, giving to a just cause is something we should all strive for. With one of our lead team members working for a mental health charity, support of mental health charities will be an important aspect to our project. We will also be looking to support other charities in the future, with our community helping us determine how best to make a difference in the world. Such decisions will also be incorporated as part of our governance system.

Catoshi Collection

Catoshi will be adding a unique array of merchandise for our community, from cat meme toys to Catoshi clothing!

Through the Catoshi Collection, you will be able to contribute to promoting the \$CATS community/brand, with proceeds going toward supporting our growth of the project and a percentage also going to our charities.

Catoshi x Spade Consulting Service

As we continue to dedicate numerous hours in extensive bridge contract research and development. Our knowledge base has grown and unlocked a new avenue for providing value. We can consult any developers that wish to launch a multi-chain token or develop their own in-house bridge.

Revenues earned from consulting will then be used to improve the Catoshi ecosytem. Over time, the amount of intellectual capital we accrue will only prove to be more valuable in the future.

Catoshi Standards

Transparency

The Catoshi team will always strive to remain transparent; maintaining open communication with our community, ensuring all queries are answered in detail. We want our community to see the vision exactly how the team views it. We believe shared clarity leads to a unified community that can accomplish goals and make a large impact.

Safety

The Catoshi team takes its role seriously and recognises the significant level of trust that communities place in Catoshi products. As a facilitator in the transfer of capital, we value safety as the most important aspect of all. We will continue to implement the highest security measures possible, delaying any releases when necessary, accountability in such a role is vital.

Proficiency

The Catoshi team aims to satisfy all contractual obligations and deliver in a timely manner. It is imperative we maintain a good reputation as each service we provide is a permanent mark and serves as a representation of our quality. To ensure this, we will make sure each task is handled with care and precision. We don't cut corners and take pride in our work as professionals.

Our Team

One of the biggest advantages our project has is the strength and unwavering belief of our core Catoshi team.

The Catoshi team is made up of 8 core team members, holding roles across strategy, product, development, marketing, and communications. With a combined 50 years of experience across cryptocurrency, blockchain, and payments, we have powerhouse personnel that allows us to deliver ground-breaking, game-changing utility to the crypto "MemeFi" world.
