INTRODUCTION

Polluxcoin is the platform for the private financial management market, built on TRON's TRC-20 blockchain technology. We unite brokers, traders, and investors into a decentralized, open and fair network, making the financial market even more global. This will allow successful traders to rapidly scale their trading strategies by attracting investments from around the world. The smart contract technology that underlies the platform will provide an automated and absolutely transparent system for investment and profit distribution.

Polluxcoin provides platform for the solution for the most crucial industry problems, such as limitedness due to the lack of information, lack of transparency and, consequently, lack of trust. Fundraising and the use of POX (Polluxcoin) will help to finance product development, marketing and advertising for the development of the platform. POLLUXDEFI is an internal platform of Polluxcoin and will be used for all investment operations and profit distributions.

DESCRIPTION OF MARKET PROBLEM

Despite the industry's steady growth, existing financial management mechanisms do not meet the requirements of modern investors and managers.

Managers, and consequently their investors, are tied to their brokers/exchanges. Simultaneously, there is no consolidated reliable source of information or statistics. This deprives investors of flexibility in their choices and limits the manager's ability to attract new funds.

The lack of transparency further exacerbates the situation. Brokers have the technical ability to influence the data on the trade history and statistics of their managers. The potential investor does not have the ability to distinguish the real trade history from the counterfeit, and the existing graph of the manager's profit from the "drawn". The mechanisms of investment, distribution of profits and commissions are hidden inside the realization of trading platforms and are not open to market participants.

A large number of fraudulent conducts in the financial management market was detected in recent years. A lot of Ponzi schemes were created under the guise of currency, stocks and other assets trading. Fraudsters used the fact that technological solutions for financial management by default are very complicated and non-transparent for users. As a result, customers lost their money overnight, and investor's confidence in the market as a whole began to fall. The natural reaction for this situation was tightening the regulations in this sphere. Conscientious companies have to implement complex and costly reporting and auditing systems as well as to impose serious restrictions for investors.

DESCRIPTION OF MARKET PROBLEM

Obviously, neither companies nor investors benefit from that. However, offshore companies continue operating without licences and deceiving their clients. All of these factors lead to serious limitations on the potential of market participants, lack of usability, and lack of trust. Despite the visibility of the existing problems in the industry, for the past 10 years, the mechanisms of interaction between market participants have not undergone significant changes. This indicates the need to introduce new technologies that will change the current situation. We believe that one of such technologies can become the blockchain. Implementation of blockchain will allow finance management market to achieve transparency and efficiency on the technological level. This will help to regain the trust to the market. Besides that, it will attract the attention of new companies and the investors of the new digital generation

OUR SOLUTION TO THIS PROBLEM:

Polluxcoin is a decentralized platform built on TRON's TRC-20 blockchain technology. Blockchain technology provides indispensable advantages, such as openness, immutability, and censorship-resistance of all stored information, whereas smart contracts, which will be carrying out investment and profit distribution, make these processes completely transparent and open. Each manager in the Polluxcoin network has his own cryptocurrency. The size of the issue depends on successful trade statistics.

The process of transferring funds to the manager is carried out by buying a manager's cryptocurrency on the internal exchange. From manager's point of view, the trade process will not change. The trader will continue to operate on the exchange or through a convenient broker. Genesis Vision, in turn, represents a common open source of reliable information about the statistics of the network participants' activities and an absolutely transparent system of investment and profit distribution, built on smart contracts.

ADVANTAGES FOR INVESTORS:

- A. Investors have access to manage all their portfolios from all over the world.
- B. Profit distribution is completely transparent portfolios for any request (high risk, low-risk, ect)
- C. Investors have additional protection, due to the fact that all the transactions are openly visible and cannot be faked.

Investing is now not just a transfer of money but the purchase of cryptocurrency, which remains liquid throughout the process and can be resold at anytime.

ADVANTAGES FOR BROKERS:

- A. Brokers have an opportunity to attract investors all over the world.
- B. There is no centralized company. It is a decentralized and is represented by all the network members.
- C. Joining the network is free with identical terms for all participants.
- D. Due to openness of Polucoin platform, brokers can be sure that their data is not compromised or disclosed.
- E. Brokers have the right to do any marketing, use any method to attract investors and establish any trading conditions.

PROJECT DESCRIPTION AND ARCHITECTURE:

Pollux coin is blockchain based decentralized cryptocurrency which runs on **TRON'S TRC-20** blockchain designed for the file sharing and storage of data. Where we can keep data securely in decentralized **cloud storage** without third party interference. There will be no issue of losing data as feared in the centralized cloud storage providers. Pollux coin holders will have multiple benefits in future. The result is an overall cost reduction for the consumer. Polluxcoin is bringing **Cloud storage** on a public Blockchain network and acts as a distributed, decentralized storage facility that makes it more efficient and cost-effective.

THE FUTURE POTENTIAL OF POLLUCOIN (POX):

Pollux is an ambitious initiative that has lined up lots of potential milestones in the years to come. Decentralized Cloud storage is the need of hour and in coming years the demand of decentralized Cloud storage will increase drastically. Pollux coin will be providing decentralized cloud storage. Pollux coin (POX) clearly outlined long-term vision with date-tagged milestones, and the increasing popularity of Cloud storage with the promise of lower costs makes it a promising endeavor in the Blockchain space.

Technical Architecture:

01 High-Throughput:

High throughput is achieved by improving The TPS in PolluxCoin (POX), which has surpassed Bitcoin (BTC) and Ethereum (ETH), to the daily-use practical degree.

02 High-Scalability:

Applications are given a wider variety of Ways to be deployed in POX because of its scalability and high effective smart contract. It can support innumerous numbers of users.

Transaction Speed

POX

ETH

BTC

HIGH TPS

POX consistently handles 2,000 transactions per second, 24x7.

PROJECT ECONOMICS

QUANTITY OF TOKENS:

Total supply of PolluxCoin is limited to 5,00,00,000 POX which will be available in different phases. The Pollux coin will be released through Crypto Minting Units (CMU) in 35 phases. Initially CMU was purchased by paying in BTC, ETH ,TRX. Pollux coin is already listed in various exchanges and will be listed in many more where it can be exchanged with crypto currencies like BTC, ETH, TRX etc.

Main issue with BTC and Ethereum is transaction speed and high transaction cost. In Bitcoin the rate of transaction per second is 3 BTC. Whereas in Ethereum rate of transaction per second is 25 ETH. Pollux coin (POX) has improved transaction speed having rate of transaction per second (TPS) 2000 POX.

Distribution

Minting - 70%

The public sale of POX (CMU) will be carried out in 35 different phases

Free Distribution - 27%

Free distribution fund through Airdrop, Bounty programs and staking rewards.

Development Fund Reserve - 3%

Reserve fund for development team for future projects

FUTURE PLANS

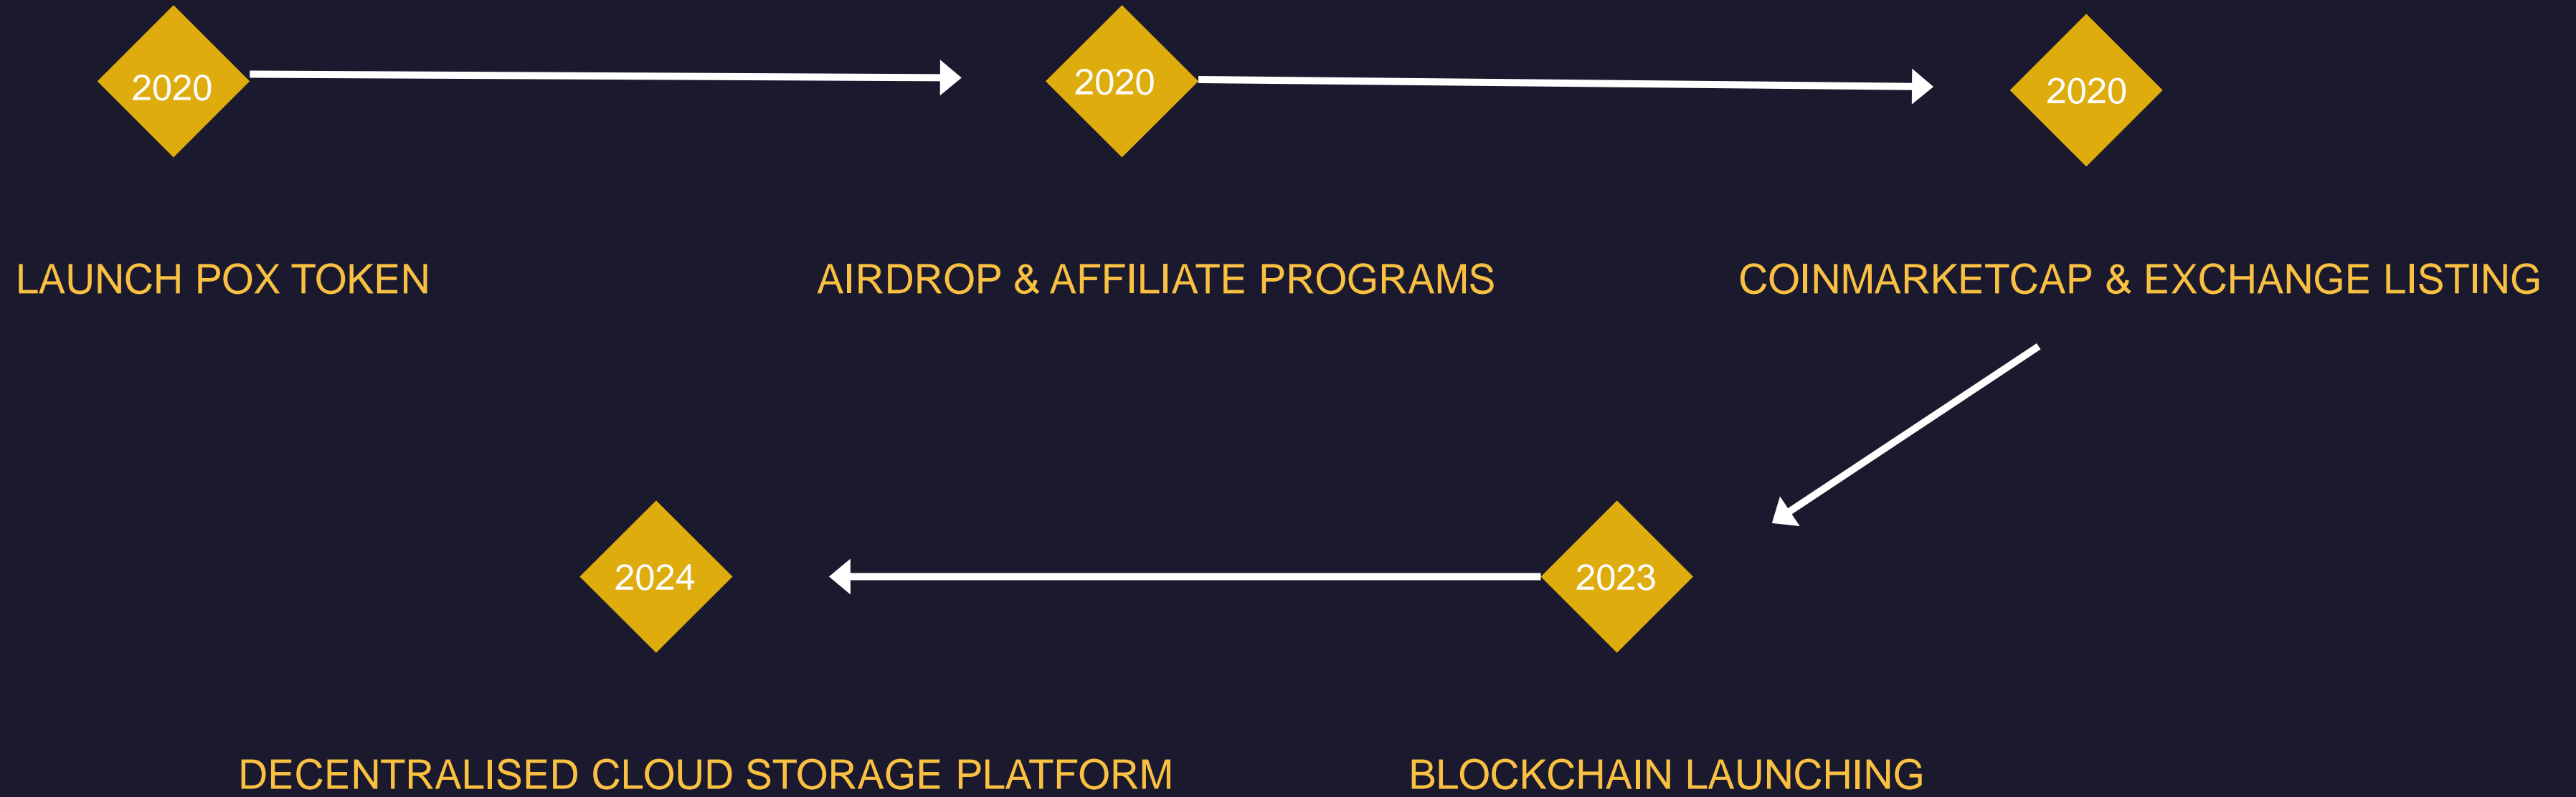

Pollux coin has future plans for many projects on which development team is working on.

As described before also, pollux coin development team is working on development of own Blockchain based on the fastest consensus DPoS - Delegated Proof Of Staking.

A unique project of decentralised cloud storage is also in list of future projects once the blockchain will be successfully launched.

More projects will be described later after the execution of mainstream projects.

ROADMAP

Meet Our **Best Team**

Ram Bilas Rana

More than 15 years experience in marketing and public relations. Mr. Ram Rana has been in Crypto Industry since 2012.

Kamal Kundal

Professional Mathematician and IT Expert , Mr. Kundal has experience in Cryptography and Blockchain Technology.
