versão 1.2

# Mahogany Reforestation

## About the project

RMOG is based on a public blockchain that grows in value when applications and new members connect with our ecosystem to solve real sustainability, environmental traceability and governance (ESG) issues.

REFORESTATION MAHOGAN's proposal is to revolutionize traditional economic processes and promote the development of digital entrepreneurship in isolated and degraded areas.

Today we have 120 hectares of land acquired with a license to plant in 60 hectares, initially we will plant 10 thousand seedlings in 6 hectares (1666 trees per hectare).

Our goal in 2022 is to reach 200 hectares of acquired land and 12 planted hectares, totaling 20 thousand seedlings per cycle.

# What is African Mahogany?

African Mahogany is one of the most profitable hardwoods for investors and producers. Its planting has increased more and more in Brazil, because there is a growing demand for alternatives against the illegal use of native trees.

It is considered an excellent long-term investment due to the ideal cutting time of 17 to 18 years.

The net profit from the final cut of the trees starts at R\$500,000.00 of reais for one hectare and the internal rate of return is between 15% and 25% per year.

The background of the entire slide is a teal color. In the center, there is a faint, semi-transparent image of a pair of hands cupping a small green plant seedling with several leaves. The hands are positioned as if they are gently holding the plant from below. The seedling has a thin stem and several oval-shaped leaves.

## **Advantages of African Mahogany**

- Drought tolerance in the young phase, an important characteristic for survival.
- High resistance to pests.
- Adaptability.

## **Why Invest in African Mahogany?**

- Great demand from the national and international wood market.
- Forest assets have been shown to be more advantageous.
- High profitability.

# How to profit from RMOG?

## Cake

As soon as you buy RMOG and keep the token in your wallet, you earn Cake.

To do this, just include Cake's token in your wallet and they will drop automatically according to the closing and moving of the chart.

## Management

### 1st Management

In the 4th year of planting, reducing the number of trees to 950 per hectare, this first cut aims to leave only the best trees in order to obtain a larger diameter among the others.

The wood from this first cut can be used to build stands, fences and pulp. The national market value is around R\$150.00 per cubic meter in foot.

## **2nd Management**

In the 8th year, 476 trees are cut, the national market value for the cubic meter of this cut is around R\$230.00 per cubic meter standing.

## **3rd Management**

In the 12th year, 238 trees are cut per hectare, at this stage each tree has about half a cubic meter of sawn wood, producing 118 cubic meters of logs per hectare. The estimated value on the international market is from 300 to 400 euros.

## **4th Management**

In the 18th year, 238 trees per hectare are extracted, where 204 cubic meters per hectare are obtained. The market value of standing wood varies between 400 and 500 euros per cubic meter of wood.

# TOKENOMICS

**Total Supply: 100,000,000,000**  
**RMOG Initial Fees**

## **Contract:**

0xee33114ef9afb0779f0505c38afbb1644f4073cc

- 7% of the transaction fee for all purchases and sales is distributed to Holds as a reward in the form of a Cake.
- 1% goes to Liquidity Pool
- 7% for Marketing

**Total fees 15% on purchase, sale and transfer of portfolios**

**Liquidity portfolio locked for 4 years**

**Note: Cakes are distributed according to the closing of batches of the chart movement and proportional to the purchased value.**

# Supply Distribution

1st from the CEO 4.5%  
2nd Investment Fund At 4.5%  
3rd Investment Fund B 4.5%  
4th Investment Fund C 4.5%

**CEO** - 0xdBA1bA5C3bef829c001C06be1A4194656Bd6d9E2

**FUND A** - 0x3936Bec87905EA296b1a18FBF3B34F44088BaACD

**FUND B** - 0x2695BaFC7E5C0022560683F3921832DCe8275Ee5

**FUND C** - 0xBe63b710290452896489E55437F9c1d73bb55f33

**BuyBack** - 0x4C3EcC325045B8a1f02583866E31eD4Ac057D3d9

## Buy Back System

A wallet that holds 4% of RMOG will rebuy the chart every time it generates a cake, contributing to the scarcity of the token and increasing its valuation.

## Wallet for new listings

Portfolio that holds 28% of the project reserved for new listings. 5% already burned leaving 23%

0x6f8139edb5473b4ede0bb8fc84367e6b6b43c671

# Management Sales

## How will liquidity work in the graph referring to the sale of managements?

Part of the profit obtained from the sale of mahogany will be injected into the chart through the purchase of tokens available on the pancakeswap and then burned in the dead wallet called BURN ADDRESS in BscScan, thus the tokens acquired would be burned, generating RMOG appreciation.

We at RMOG found a way to do this burn without generating sales on the chart. On 11/24/2021, a 5% supply test firing was carried out and the firing portfolio was created with this.

In this way, from the 4th year onwards, the project will become self-sustainable, as we will always have large purchases and then fires that will increase the price of RMOG and make it increasingly scarce.

From the beginning, we were concerned with the way in which liquidity would be injected into the chart.

In some projects that we follow whenever there is a burn it falls, so our developers bent over their computers so that we could then create the first form of smart burning which is considered by them practically as an industrial secret, as this sets us apart from all others. other existing tokens.

# Where to buy?

You can buy our Token through the Metamask or TrustWallet wallets at:

- PancakeSwap
- Poocoin
- Swap da Xmine

## CONTRACT

0xee33114ef9afb0779f0505c38afbb1644f4073cc

# ROADMAP

## PHASE 1

- Creation of the RMOG brand
- Land Acquisition
- Seed acquisition
- Nursery Creation
- Cultivation of 10,000 seedlings
- Team Creation

## PHASE 2

- Contract creation
- Whitepaper Creation
- Website Creation
- Creation of Social Media
- Pre sale
- Launch on PancakeSwap
- Launch Cake Panel
- Coingecko listing
- Closing of the first partnerships

## PHASE 3

- CMC listing
- Acquisition of new planting areas
- Expansion of the team.
- contract audit
- Planting of 10,000 seedlings

## PHASE 4

- Listing on major exchanges
- 1st management 4 years
- Distribution of profits to holders
- Expansion of Partnerships

# who is the CEO

Daniel Morceli is the CEO of Reforestation Mahogany, Token, which works in the area of sustainable reforestation. Brazilian, born in Brasília (DF), bachelor's degree student in Law, IT Technician.

In 2008 as Founder and CEO of ViperServers, one of the pioneers in hosting, colocation, and rental of Cloud servers in Brazil and the United States. Company in which in 2010 it was merged with the Brasil Servers group.

In 2010 he founded FX Telecom, a telecommunications company, where he exercised his functions until mid 2019.

Enthusiast in the crypto world since 2008 he always looked for a way to connect his projects to this world.

In 2020, as a result of the pandemic, and numerous events resulting from COVID-19, it completely changed its field of activity, leaving for rural areas, where today it develops mahogany reforestation work.

In 2021, Seeking to unify these two worlds, the high profitability of reforestation and cryptomeodas, started the Reforestation Mahogany (RMOG) project.
