SHIBNOBI OVERVIEW - 概要

SHIBNOBI is a token that generates passive income on the Ethereum, Binance Smart Chain, and Polygon Networks. It's primary use case is to develop an easy to use token swap across all 3 chains. This is being created by a Based Team and Doxed Devs.

Instant staking through reflection (Reflections In \$SHINJA) and Anti-whale mechanism.

The anti-bot measures mean that at launch and during trading, bots will be spotted and sniped, so they cannot buy and sell SHIBNOBI. This is an essential part of sustaining a healthy and long term growth pattern.

The experienced team have previously worked on numerous other successful projects.

ICO - データの起動

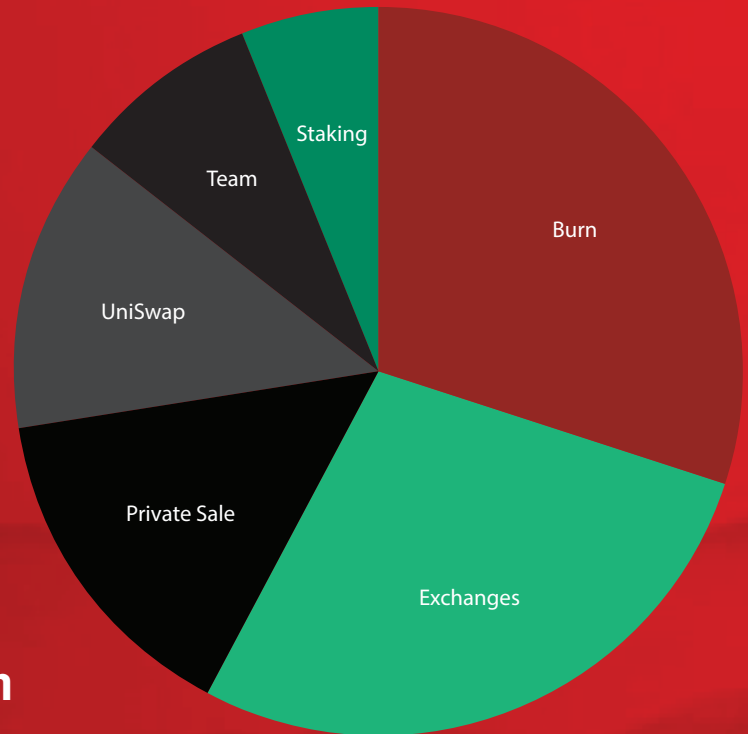

There will be a private sale on Ethereum followed by a ICO on Uniswap and Fegex.

The ICO launch will go live on Uniswap and Fegex with this raised liquidity. There will be a small portion of the supply which will be used for future exchange liquidity.

Roadmap - ロードマップ

Phase 1

- ✓ Setup Social Media
- ✓ Develop Website
- Giveaways
- Marketing - In Process

Phase 2

- AMA's
- Uniswap Launch
- FEGEX Launch
- Poocoin Ads
- Influencers- In Process

Phase 3

- Apply for listing on CMC
- Apply for listing on CG
- Exchange Listing

Phase 4

- Launch SHIBNOBI Swap
- Intergalactic mission
- Secret - To Be Announced

SHIBNOBI

シブノビ

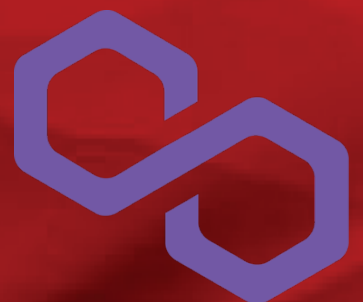

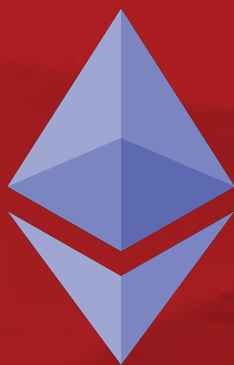

Mult-Chain - マルチチェーン

SHIBNOBI is not just another meme token, it is something fun but with utility. SHIBNOBI will be launched on multiple chains. First launching on the Ethereum Network, to prove that the developers at SHIBNOBI are serious about what we are developing. Ethereum brings stability to the brand and products. This is why we are launching on ETH First because we are in it for the long haul.

Next SHIBNOBI will launch a presale on dx sale to prepare for our launch on the BSC (Binance Smart Chain) Network. This will allow all you Degen's the chance to ape into this project. We recognize that there is a huge BSC following and SHIBNOBI launching on BSC along with ETH will bring an entirely separate pool of investors to the project.

Lastly SHIBNOBI will begin a dx sale in preparation of launching on the Polygon Network. Polygon is up and coming and is the underdog. We feel this will also bring us a different set of investors to the project.

All of this will tie into our use case which is the development of our own token swap "SHIBNOBI Swap".

SHIBNOBI Swap

シブノビスワップ

SHIBNOBI Swap will be a cross-chain token swap that will allow you to trade between ETH, BSC, and Polygon.

Now you know why we are launching on all 3 networks!

Who is ready to take this project to the moon and beyond! Now you know why SHIBNOBI is the deadliest Shiba in the Cryptoverse.

Come join our hoard of SHIBNOBI warriors and let your inner Ninja out!

Token Name: SHIBNOBI

Token Symbol: SHINJA

Token Decimals: 9

ETH CA: 0xab167e816e4d76089119900e941befdfa37d6b32

Total Supply: 69,000,000,000,000,000,000,000
