

TheDopeDAO

gm. TheDopeDAO makes use of levels to ensure you guys learn in the dopest way. Beginners can start off with level 0 where we share resources that are simple and easy to understand. We cover the basics of the beautiful web3 space such as decentralization, DAOs, what makes a product a web3 product and how web3 is different from web2. After a brief understanding, you level up!

At level 1, we get serious. We get more technical. We show you how you can build decentralized apps, use DAO tools, learn the coding languages and understand how they are different from web2 coding languages.

And after you have made yourself familiar with these topics, you level up again

As you level up, things get more interesting and more in-depth.

At the last level, The dope team's collaborations with chains and some of the dopest web3 companies come into play to provide the DAO members with some great opportunities. They can start building on the various chains or contribute to some of the best companies in the web3 ecosystem and even start their own web3 companies.

TheDopeDAOs mission is to onboard new students into the web3 space and to ensure this onboarding is done in the dopest manner possible. We bring the resources you need and the opportunities to build the dopest products in the web3 ecosystem.
