Conclusion

# Introduction

It is the massive business prospect increasing the demand for crypto tokens for various business purposes. These are the tokens (of value) that give you the right to access any services or product on the blockchain network. From the business perspective, a crypto token is a trending idea which is pushing business and financial entities to get into tokenisation.

# Introduction

The decentralized, tamper-proof blockchain has brought trust through technology to certain industries, however, further integrative mechanisms are needed to join together diverse trust systems and applications into a single new trust ecosystem.

**UTC** establishes the connecting infrastructure for a trust ecosystem, with effective coordination of trust and data sources, as well as providing the infrastructure for distributed application development. This White paper focuses on UTC technological framework, key technology principles, business models and core protocols.

# BSC Smart Chain

**UTC** is a crypto token based on trading over Forex, crypto and travel platform network that allows users to leverage their blockchain assets to secure gains. Our Secured Automated business platform is a protocol and asset agnostic architecture designed to adapt to the constantly growing class of blockchain assets. The system is designed such that, if you have an asset you want to hold on to, you can convert it into UTC token, regardless of credit history or geographic constraints. The UTC Platform is automated, efficient, and cryptographically secure. It offers a compelling solution to the problem many traders and investor face when they need or want cash to make a purchase or investment.

**UTC** enables the members of the UTC token holders, thereby giving them access to financial markets, offsetting of trades in Forex as well Crypto, avoiding exchange fees and maintaining their long position in the asset they hold. UTC business models specifically designed for blockchain assets operating as a second layer protocol which sits on top of any public or permissioned blockchain.

# Technical Details

UTC is a crypto token built on BEP-20 or simply Binance smart chain to get a sense of BEP20, let's first look into Binance Smart Chain's properties and why it was created. Simply put, Binance Smart Chain, or BSC, is a blockchain made to run smart contracts. It works together or in parallel with Binance Chain, Binance's first blockchain used on its non-custodial exchange.

BEP20 is a Binance token standard which allows users to deploy tokens or cryptocurrencies on BSC. More specifically, crypto assets on other chains can be transferred to the Binance smart chain in the form of pegged BEP20 tokens like UTC. Creating a token on the bsc platform is surpassingly easy, affordable and reliable.

Name : Unitech

Url : [www.utc.money](http://www.utc.money)

Short Name : UTC

Type : BEP 20 Binance smart chain based token

Contract Add : 0x52171ffa4ceda60ff9795e1f111adb14c3d7025e

Total Supply : 41 Million

Initial Block Count : 8319873

# Token Distribution

Name: UTC Token

Symbol: UTC

Total Supply: 41 Million

- ▶ 8.2 Million premined for exchanges & liquidity
- ▶ 20.5 Million for UTC Eco System
- ▶ 4.1 Million for use in ONGO system
- ▶ 4.1 Million for Airdrop
- ▶ 4.1 Million for Founders

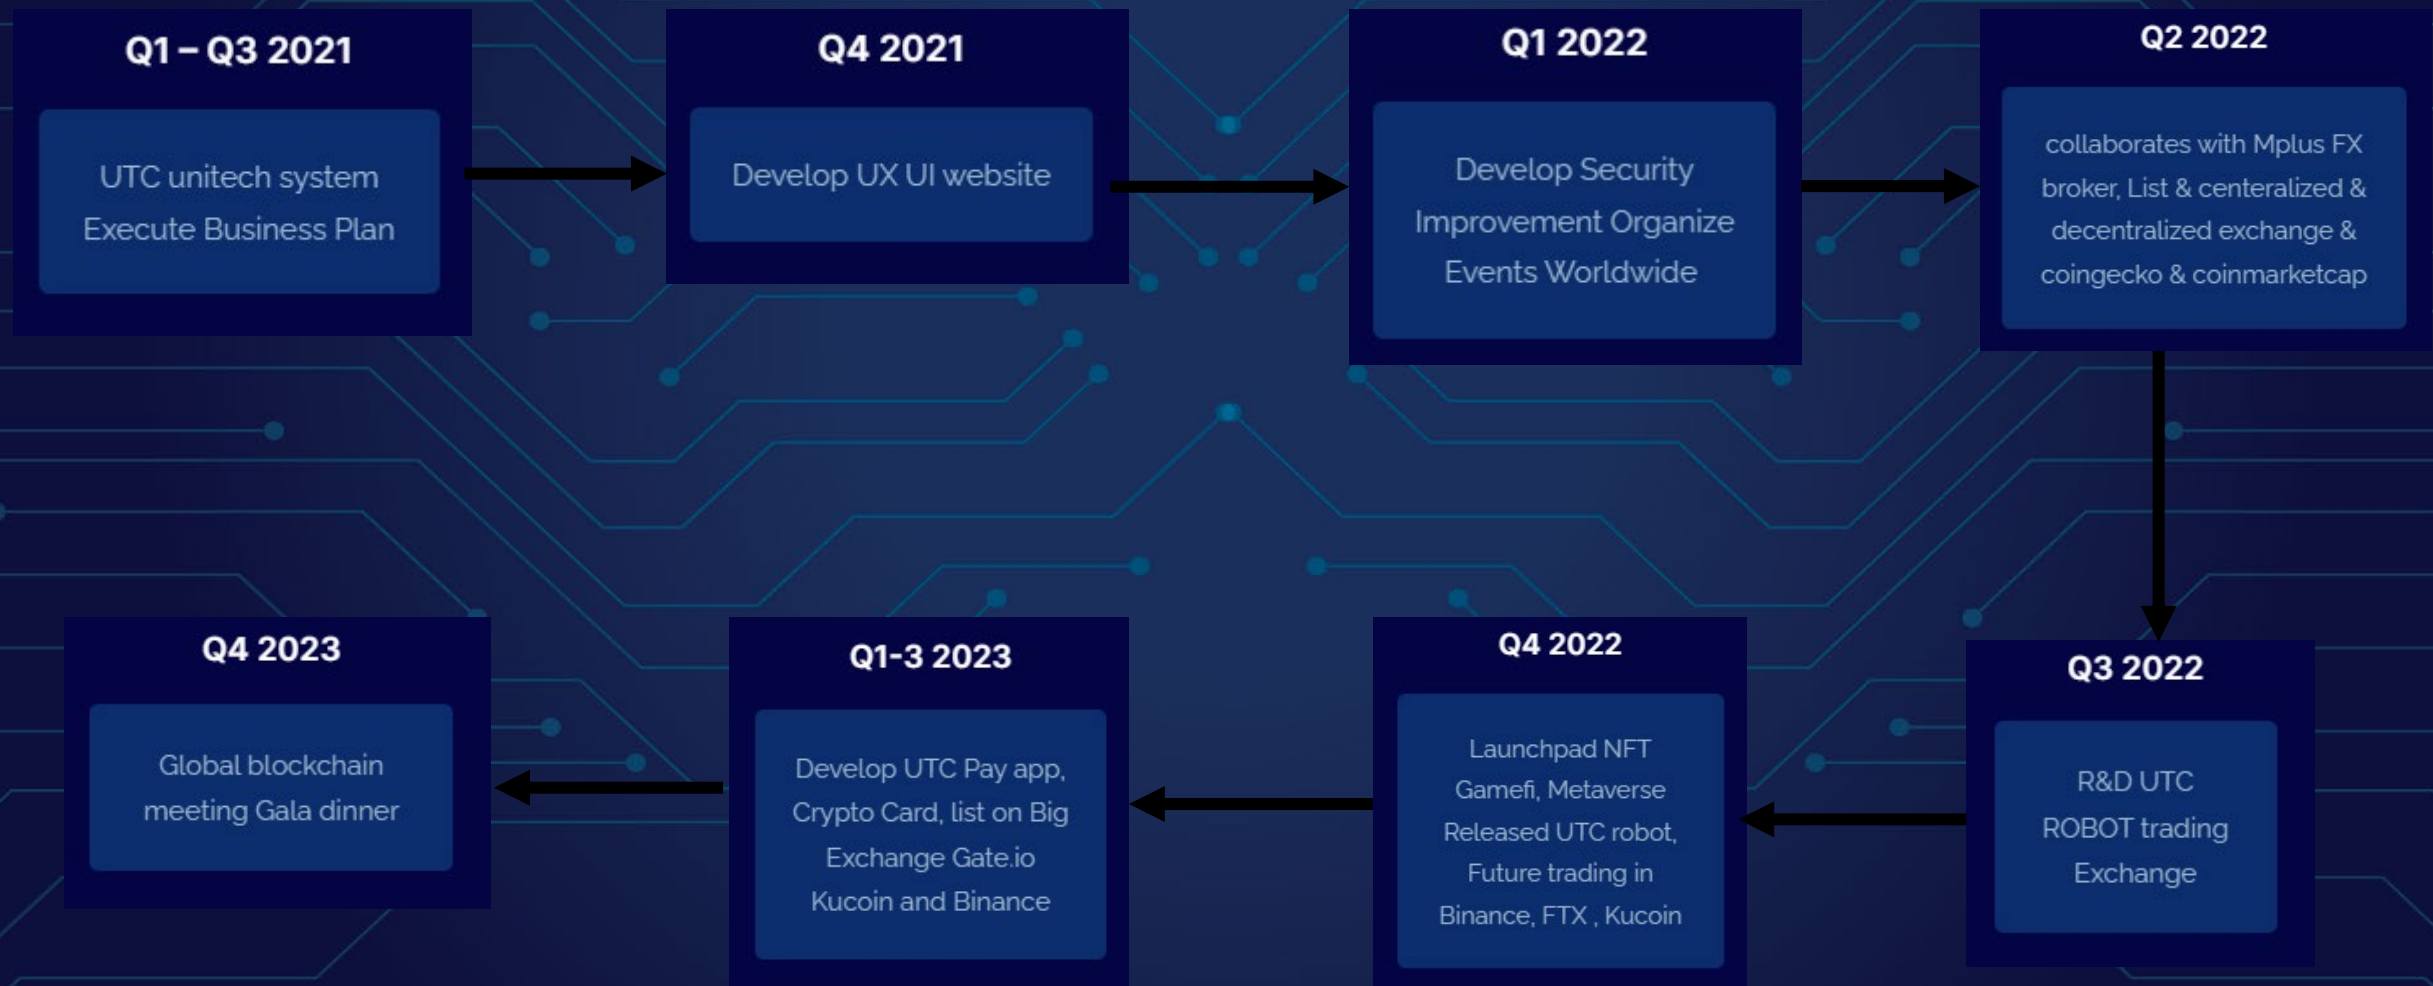

Once **UTC TOKEN** deployed and launched is launched on various exchanges and also seen on **Coinmarketcap & Coingecko**.

 <b>Unitech (UTC)</b> 0.971445 USD (-3.38%)		
RANK 6604	MARKET CAP \$? USD	VOLUME \$2.23 K USD

# UTC Trading Forex

In Forex trading there comes many strategies as discussed below

# Hedging

- a. In finance is a risk management strategy It deals with reducing the risk of uncertainty related to the adverse price fluctuations in an asset
- b. The aim of this strategy is to restrict the losses that may arise due to unknown fluctuations in the investment prices and to lock the profits therein It works on the principle of offsetting i e taking an opposite and equal position in two different markets in simple terms, it is hedging one investment by investing in some other investment. When you secure your ' investment's loss by offsetting it with ' investment's profit, it known as 'AREAS OF HEDGING

# Hedging

c. Commodities include agricultural products, energy products, metals, etc

d. Securities include investments in shares, equities, indices, etc

e. CURRENCIES include foreign currencies crypto currencies

f. INTEREST RATES Interest rates include the lending and borrowing rates

# Arbitrage

Arbitrage is the process of exploiting differences in the price of an asset by simultaneously buying and selling it. In the process, the arbitrageur pockets a risk-free return. Differences in prices usually occur because of imperfect dissemination of information. Arbitrage occurs when a security is purchased in one market and simultaneously sold in another market at a higher price, thus considered to be a risk-free profit for the trader. Arbitrage provides a mechanism to ensure prices do not deviate substantially from fair value for long periods of time. With advancements in technology, it has become extremely difficult to profit from pricing errors in the market. Many traders have computerized trading systems set to monitor fluctuations in similar financial instruments. Any inefficient pricing setups are usually acted upon quickly, and the opportunity is often eliminated in a matter of seconds. Arbitrage is a necessary force in the financial marketplace. Arbitrage opportunities exist when the prices of similar assets are set at different levels. This opportunity allows an investor to achieve a profit with zero risk and limited funds by simply selling the asset in the overpriced market and simultaneously buying it in the cheaper market. This buying and selling of the asset will push the cheaper asset's price up and the higher asset price down. This process will continue until the asset price is equal in both markets.

# Correlation

In the finance and investment industries, is a statistic that measures the degree to which two securities move in relation to each other. Correlations are used in advanced portfolio management, computed as the correlation coefficient, which has a value that must fall between -1 and 1. A perfect positive correlation means that the correlation coefficient is exactly 1. This implies that as one security moves, either up or down, the other security moves in lockstep, in the same direction. A perfect negative correlation means that two assets move in opposite directions, while a zero correlation implies no relationship at all.

# Correlation

For example, large cap mutual funds generally have a high positive correlation to the Standard and Poor's (very close to 1) small cap crypto have a positive correlation to that same index, but it is not as high generally around 0.8. However, put option prices and underlying stock prices tend to have a negative correlation. As the stock price increases, the put option prices go down. This is a direct and high magnitude negative correlation.

# Martingale

Martingale system is a system of investing in which the dollar value of investments continually increases after losses or the position size increases with the lowering portfolio size. The Martingale system was introduced by French mathematician Paul Pierre Levy in the 18<sup>th</sup> century. The strategy is based on the premise that only one good bet or trade is needed to turn your fortunes around. This technique can be contrasted with the anti martingale system, which involves halving a bet each time there is a trade loss and doubling it each time there is a gain. Martingale strategies rely on the theory of mean reversion. Without a plentiful supply of money to obtain positive result you need to endure missed trades that can bankrupt an entire account. It's also important to note that the amount risked on the trade is far higher than the potential gain. Despite these drawbacks, there are ways to improve the martingale strategy that can boost your chances of succeeding.

# UTC Trading Crypto

In the crypto trading world since 2009 users have experienced uncertainty but the users who believed in crypto and held for long periods had gained futuristic gains which varied from as low as 10% to as high as 1,500,000%.

So here at UTC token with our mission & vision and our projects we are creating a history where UTC token will replicate the price rise of most of the tokens including bitcoin.

# UTC Travel Platform

- ▶ A platform where tickets for flight, hotels, holidays, cab booking etc. would be issued in a decentralized manner and payment would be completed with crypto as well traditional methods.
- ▶ UTC travel to make a public ledger which can be used & carry all your travel documents without a need of a paper.
- ▶ 1<sup>st</sup> time in history a public ledger would come into existence which not only will make all go paper less but also contract giving alters on travel dates, security checks, etc.
- ▶ UTC travel to offer all top notch services required for anyone to get around world

1	Flight ticket booking	2	Hotel reservations	3	Shopee Pay
4	Cab booking	5	Train booking	6	Buses
7	Topup	8	True Money wallet Recharge	9	Rabbit Line Pay

The world post pandemic has changed completely where now travel is not only about making bookings staying at hotel.

UTC travel has come up with an unique solution to book tickets & hotels on open decentralized market where prices are match to provide its lowest bid.

UTC travel will appreciate the price of UTC token through a decentralized eco system and each and every holder of the UTC token will be benefited.

# Conclusion

UTC token is backed by team of professional members with over 14 years of experience in Forex & 8 years in Crypto space and has executed over 90 different projects in Forex & Crypto

UTC has go huge potential of returns on investments once of exchange it could easily be 3-5X of its price.

So come join us and get more benefits
